

# DISPLAYS & CONTROLLERS For Level Applications

## Loop-Powered Solutions

The main benefit of loop-powered meters is they can be powered directly from the 4-20 mA loop. So if you need a local tank side indicator for an existing 4-20 level transmitter, all you have to do is break the wires and install the indicator.

Bar Graph for Visual Indication

Easy Installation

PD6800-OL1 ProtEX-Pro™  
Decimal Display

PD6801 ProtEX-F&I™  
Feet & Inches Display

## Line-Powered Solutions

The main benefit of line-powered meters is they provide the 24 VDC to power the 4-20 mA level transmitter and can be equipped with optional relays for alarming and controlling applications. This makes them ideal for sump pump control applications; even in hazardous areas!

Linearize Non-Linear Tanks

## Sump Pump Control

## Round Horizontal Tank

## Open Channel Flow

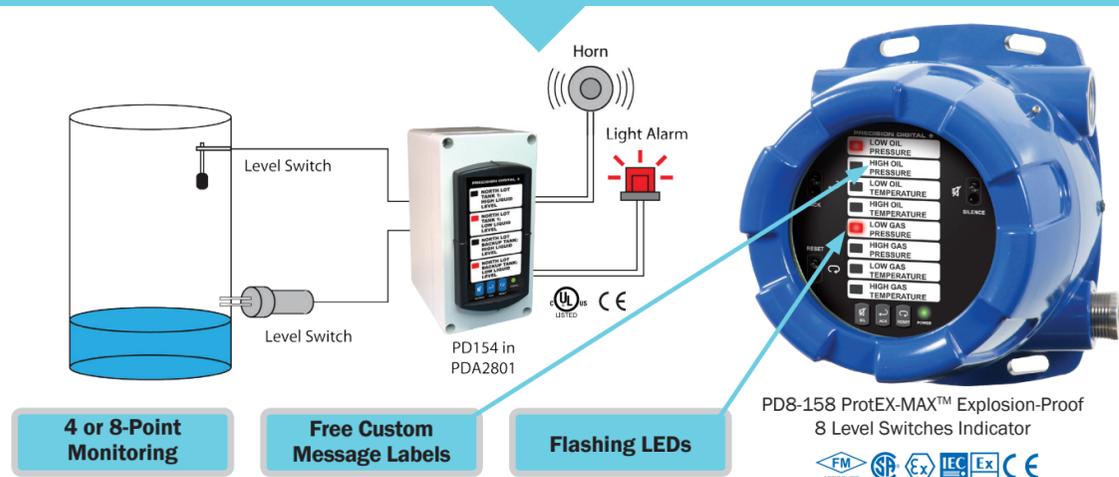

Loop-powered level displays install easily, just about anywhere.

Line-powered level displays make great pump controllers, can linearize round horizontal tanks, and will even do open channel flow.

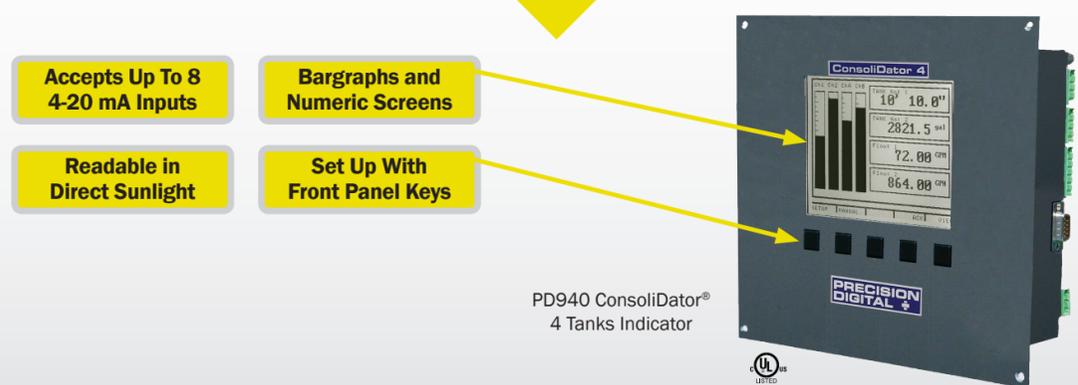

## Level Switch Status Solution

The main benefits of the PD154 & PD158 Vigilante® II level switch status indicators is they contain all the logic needed to monitor level switches. And, they notify you in three ways when a level switch trips: front panel flashing LED, internal horn, and built in relay.

## Multi-Tank Display Solution

The main benefit of the ConsoliDator® is that it can display up to eight level transmitters in both numeric and bargraph format at the same time.

## Modbus® Multi-Variable Solutions

The main benefit of Modbus multi-variable scanners is they can display up to 16 variables from a multi-variable level transmitter on a single instrument. For instance, you could display level, interface and temperature from up to five transmitters.

# LEVEL DISPLAYS & CONTROLLERS

For 4-20 mA, Modbus or Switch level signals

Show operators the tank, sump, vessel or well information they need... right where they want it!

- Power the level transmitter from the display; no 24 VDC power supply needed.
- Or...Break the 4-20 mA level loop and install the display; no extra power needed.
- Display in actual feet & inches, if that's what you want.
- Install the display indoors or outdoors; in safe or hazardous areas.
- Display volume in round horizontal tanks.
- Control sump pumps with pump alternation.
