Multiple Unit First-Out Alarm Indication

Multiple Unit First-Out Indication

If multiple ProtEX-MAX annunciators are connected for multiple unit first-out indication, only one input from all connected devices will display as a first-out alarm.

First-Out Alarm Indication

The ProtEX-MAX Annunciator can be programmed for multiple sequences with first-out alarm indication. This feature indicates the first point of failure of a system when multiple alarms occur.

ALARM SEQUENCES

The ProtEX-MAX Alarm Annunciator can be programmed for all common ISA sequences including A, F1A, F2A, F3A, M, F1M. Selectable ISA-1 (Silence Button), -4 (No Lock-In), and horn disable options. Two popular sequences are detailed below.

ATEX/IECEx Specific Conditions of Use:

- The equipment label and epoxy coating may generate an ignition-capable level of electrostatic charges under certain extreme conditions. The user should ensure that the equipment is not installed in a location where it may be subjected to external conditions (such as high-pressure steam) which might cause a build-up of electrostatic charges on nonconducting surfaces. Additionally, cleaning of the equipment should be done only with a damp cloth.
- 2. Flameproof joints are not intended to be repaired.
- All entry closure devices shall be suitably certified as "Ex d",
 "Ex t" and "IP66/68" as applicable. Suitable thread sealing
 compound (non-setting, non-insulating, non-corrosive, not
 solvent based, suitable for the ambient rating) must be used
 at the NPT conduit entries to achieve the IPx8 rating while
 maintaining the Ex protection concept.
