# ProtEX-MAX PD8-7000 Explosion-Proof Temperature Meter
## Instruction Manual

**ProtEX™ MAX**

CSA ◦ Ex ◦ IECEx ◦ CE

CapTouch™

**MeterView Pro**
USB Install

- Fully Approved Explosion-Proof Temperature Meter
- J, K, T, E, R, S, B, N, C Thermocouples
- 100 or 1000 Ω Platinum, 10 Ω Copper, 120 Ω Nickel RTDs
- 1° or 0.1° Resolution
- User Programmable Display in Fahrenheit or Celsius
- Capture Maximum and Minimum Temperature Readings
- Optional Isolated 4-20 mA Output Turns the Meter into a Temperature Transmitter
- Averages up to 10 RTD Sensors
- Automatic Cold Junction Compensation
- Dual-Line 6-Digit Display, 0.60" (15.2 mm) & 0.46" (12.0 mm)
- CapTouch Through-Glass Button Programming
- 4 Relays with Interlocking Capability + Isolated 4-20 mA Output Option
- Free PC-Based, On-Board, MeterView Pro USB Programming Software
- SunBright Display Standard Feature; Great for Outdoor Applications
- Operating Temperature Range: -55 to 65°C (-67 to 149°F)
- CSA Certified as Explosion-Proof / Dust-Ignition-Proof / Flame-Proof
- ATEX and IECEx Certified as Dust-Ignition-Proof / Flame-Proof
- Input Power Options: 85-265 VAC / 90-265 VDC or 12-24 VDC / 12-24 VAC
- Programmable Display, Function Keys & Digital Inputs
- Flanges for Wall or Pipe Mounting
- Explosion-Proof Aluminum or Stainless Steel NEMA 4X / IP68 Enclosures
- On-Board RS-485 Serial Communications
- Modbus® RTU Communication Protocol Standard
- Password Protection
- Four 3/4" NPT Threaded Conduit Openings
- Stainless Steel Pipe Mounting Kit
- Stainless Steel Tag Available
- 3-Year Warranty

**Disclaimer**
The information contained in this document is subject to change without notice. Precision Digital makes no representations or warranties with respect to the contents hereof and specifically disclaims any implied warranties of merchantability or fitness for a particular purpose. See Warranty Information and Terms & Conditions on www.predig.com for complete details.

⚠️ **CAUTION**

• Read complete instructions prior to installation and operation of the meter.

⚠️ **WARNINGS**

• Risk of electric shock or personal injury.
• This product is not recommended for life support applications or applications where malfunctioning could result in personal injury or property loss. Anyone using this product for such applications does so at his/her own risk. Precision Digital Corporation shall not be held liable for damages resulting from such improper use.
• Failure to follow installation guidelines could result in death or serious injury. Make sure only qualified personnel perform the installation.
• Never remove the meter cover in explosive environments when the circuit is live.
• Cover must be fully engaged to meet explosion-proof/dust-ignition-proof/flame-proof requirements.

⚠️ **WARNING**
Cancer and Reproductive Harm - www.P65Warnings.ca.gov

**Limited Warranty**
Precision Digital Corporation warrants this product against defects in material or workmanship for the specified period under "Specifications" from the date of shipment from the factory. Precision Digital's liability under this limited warranty shall not exceed the purchase value, repair, or replacement of the defective unit. See Warranty Information and Terms & Conditions on www.predig.com for complete details.

# FREE MeterView Pro Programming Software

*The meter can be powered from the USB connection. When using the USB connection, **DO NOT** apply AC or DC power to the meter.*

The easiest and quickest way to program your ProtEX-MAX meter is to use the FREE MeterView Pro programming software. This software is loaded into the meter and connects and installs directly to your PC with a USB cable. We recommend that the first thing you do after taking the meter out of the box is connect the ProtEX-MAX to your PC with the provided USB cable – do not use a different cable. **DO NOT** apply AC or DC power to the meter while your PC is connected to the meter as it will disrupt the USB connection. You don't even have to apply an input signal.

MeterView Pro programming software is intuitive, and most customers can get their meter programmed as they like without even looking in the manual.

**Watch MeterView Pro Software Video at www.predig.com/meterviewpro**

In addition to programming, the software may be used for:

• Monitoring
• Datalogging using your PC
• Generating and saving programming files for later use

Once your meter is programmed the way you want it, you can wire it up for your application per the instructions in this manual and install it. If you find that you need to make adjustments to the programming after the meter is installed, you can use the programming buttons and the instructions in this manual to do so.

⚠️ **WARNING**

• The meter should only be connected to a computer while it is located in a safe area.

# Table of Contents

# Table of Figures

# Introduction

The ProtEX-MAX PD8-7000 is an explosion-proof digital temperature meter with a big, bright display that can be read in any lighting condition and is available with a variety of useful options. The meter is housed in a field-mountable, NEMA 4X/IP68 rated enclosure available in either aluminum or stainless steel for convenient indoor and outdoor installation

The ProtEX MAX PD8-7000 can be programmed by the user to accept type J, K, T, E, R, S, B, N, and C thermocouples as well as 100 or 1000 Ω platinum, 10 Ω copper, and 120 Ω nickel RTD inputs. The meter's six-digit display allows it to display the higher temperature thermocouples up to their standard Fahrenheit range, such as 2400 degrees for the Type K thermocouple.

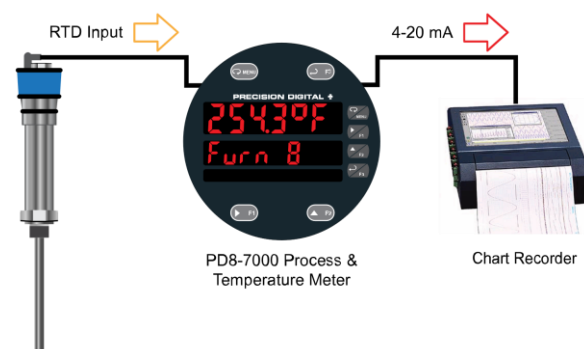

A fully loaded PD8-7000 temperature meter comes with four SPDT relays, an isolated 4-20 mA output, five digital inputs and four digital outputs, and RS-485 serial communications. The four relays can be used to indicate high or low temperature alarms or for simple on / off temperature control.

# CapTouch Buttons

To make it possible to program and operate the ProtEX-MAX in a hazardous area, the programming buttons that are located behind the glass window can be operated without removing the cover by using the CapTouch through-glass buttons. The operator puts their finger on the glass over the button and the button is actuated.

# Ordering Information

## Aluminum Enclosure

### 85-265 VAC Models

| Model | Standard Features | Options Installed |
|---|---|---|
| PD8-7000-6H0 | 5 Digital Inputs, 4 Digital Outputs, RS-485 Communications | No options |
| PD8-7000-6H7 | | 4 relays 4-20 mA output |

### 12-24 VDC Models

| Model | Standard Features | Options Installed |
|---|---|---|
| PD8-7000-7H0 | 5 Digital Inputs, 4 Digital Outputs, RS-485 Communications | No options |
| PD8-7000-7H7 | | 4 relays 4-20 mA output |

## Stainless Steel Enclosure

### 85-265 VAC Models

| Model | Standard Features | Options Installed |
|---|---|---|
| PD8-7000-6H0-SS | 5 Digital Inputs, 4 Digital Outputs, RS-485 Communications | No options |
| PD8-7000-6H7-SS | | 4 relays 4-20 mA output |

### 12-24 VDC Models

| Model | Standard Features | Options Installed |
|---|---|---|
| PD8-7000-7H0-SS | 5 Digital Inputs, 4 Digital Outputs, RS-485 Communications | No options |
| PD8-7000-7H7-SS | | 4 relays 4-20 mA output |

## Accessories

| Model | Description |
|---|---|
| PDAPLUG75 | 3/4" Metal Conduit/Stopping Plug |
| PDA-SSTAG | Custom Stainless Steel Tag (see website for convenient ordering form) |
| PDA6848-SS | 2" U-Bolt Kit Stainless Steel |
| PDA7485-I | RS-232 to RS-485 isolated converter |
| PDA8485-I | USB to RS-485 isolated converter |

# Key Features

**FRONT**

**CONNECTIONS**

- Form C (SPDT) relays
- Isolated supply available even on 12/24 VDC input power models
- Removable terminal blocks
- 2 or 4 relays + isolated 4-20 mA output option

*Connections for PD8-7000-6H7 & PD8-7000-7H7*

## The Only Explosion-Proof Temperature Meter You Will Ever Need

Front, back and in between, the PD8-7000 ProtEX-MAX explosion-proof temperature meter boasts specifications, features and functionality that make it the only hazardous area temperature meter you will ever need. The first thing you notice about the PD8-7000 is its modern looking, rugged, explosion-proof housing with convenient mounting flanges, available in aluminum or stainless steel. Housed inside this enclosure is a dual-line, 6-digit display with high-intensity LEDs that can be read in direct sunlight.

The PD8-7000 has all the same features as our PD7000 1/8 DIN temperature meter, as a fully approved explosion-proof product. The product is certified by CSA as Explosion-Proof / Dust-Ignition-Proof / Flame-Proof, and is ATEX and IECEx certified as Dust-Ignition-Proof / Flame-Proof.

The ProtEX MAX PD8-7000 can be programmed by the user to accept type J, K, T, E, R, S, B, N, and C

thermocouples as well as 100 or 1000 Ω platinum, 10 Ω copper, and 120 Ω nickel RTD inputs. The meter's six-digit display allows it to display the higher temperature thermocouples up to their standard Fahrenheit range, such as 2400 degrees for the Type K thermocouple. The user can also set the meter to display in Fahrenheit or Celsius and set the resolution to 1 degree or 0.1 degree.

One of the most common applications for the PD8-7000 with the isolated 4-20 mA output is to act as an explosion-proof temperature transmitter with a big display. The meter will also capture the maximum and minimum readings.

Finally, all these features and capabilities can easily be programmed without removing the cover using CapTouch buttons in a hazardous area or with free MeterView Pro PC-based software in a safe area.

8

# Easy Programming Methods

The ProtEX-MAX can be programmed in a hazardous area with the through-glass CapTouch buttons without removing the cover, in a safe area with the front panel push buttons with the cover removed, or in a safe area with free, PC-based MeterView Pro software. MeterView Pro is resident on the ProtEX-MAX and is accessed by a provided USB cable, so it is by far the easiest way to program the ProtEX-MAX.

The meter comes from the factory pre-calibrated for all thermocouple and RTD inputs so the user need only set the RTD / TC switch in the appropriate position and select the desired input. The user can also set the meter to display in Fahrenheit or Celsius and set the resolution to 1 degree or 0.1 degree. Once programming is completed it can be locked with a password.
The ProtEX-MAX comes preloaded with free MeterView Pro programming software that connects and installs directly to your PC with a standard USB cable, also provided free with each instrument. This eliminates the need to insert CDs, install drivers, or download software from the internet. When you connect your ProtEX-MAX to your PC, MeterView Pro is downloaded to your PC, the software automatically selects the model you are programming, and you're ready to start programming immediately. Further simplifying the programming process, the ProtEX-MAX can be powered from the USB port, so no need to apply external power while programming your meter. In addition to programming, the software will also allow you to monitor, and datalog a ProtEX-MAX using your PC. You can also generate and save programming files for later use.

# Advanced Display Features

## Dual-Line Makes All the Difference

The ProtEX-MAX's dual-line display makes all the difference both when programming the instrument and when using it in the field. When programming the instrument, the dual-line display prompts for the needed information and also helps you keep track of where you are in the setup process. When using the instrument, the dual-line display provides more information such as displaying the temperature on the main display and a tag on the second display.

## Programming Assistance

The ProtEX-MAX's dual-line display makes programming the instrument much easier because the second display helps you keep track of where you are in the setup process.

**Input Setup**

**Display Setup**

## Informative Display

The most common setup for the dual-line display on the PD8-7000 is to show the temperature (in °F or °C with 1° or 0.1° resolution) on the main display and a tag on the second display.

In addition, the main display can be programmed to indicate the maximum (peak), minimum (valley), alternate between the maximum/minimum, or one of four alarm set points. The second display can also be configured to display set points, user defined messages, or simply turned off.

## Super-Bright Display

The ProtEX-MAX comes standard with a super-bright display, with LEDs that are visible even in direct sunlight. The display also has up to eight levels of adjustable intensity for optimum visibility in any lighting condition.

## Explosion-Proof Temperature Transmitter with Huge Display

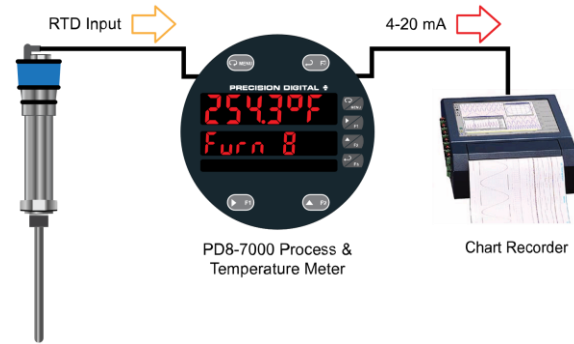

If you want to be able to easily read the temperature of your process in a hazardous area as well as re-transmit an isolated 4-20 mA signal, the PD8-7000 is the perfect choice. In the case of thermocouples, the PD8-7000 will linearize the signal, provide cold junction compensation, display the temperature on a big bright display that can be read in any lighting condition and output an isolated 4-20 mA signal. The PD8-7000 will provide the power drive this output and the output can be scaled for any range you want.

## 500 V of Isolation on the Output

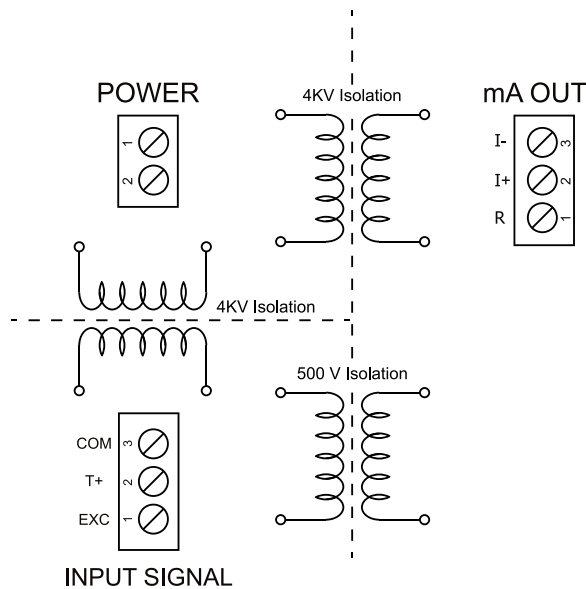

The inputs and outputs of the ProtEX-MAX PD8-7000 are electrically isolated to prevent ground loops and make wiring easier. All inputs, outputs and power supplies are fully isolated from one another.

## Display & Toggle Maximum / Minimum Reading

One of the most useful features of the PD8-7000 is its ability to capture and display maximum and minimum temperature readings either momentarily or continuously.

1. Display momentarily by assigning to the F1-F3 function keys or to the digital inputs in the User menu.

2. Display continuously by assigning either display to max/min through the Display menu.

Any of the F1-F3 function keys (buttons) and the digital inputs can be programmed to reset the max & min readings. The meters are set at the factory to display the max reading by pressing the Up arrow/F2 button and to use the Right arrow/F1 button to access the Reset menu.

See *Factory Defaults & User Settings* on page *54* for complete details.

## Multiple RTD Sensor Averaging

**Figure 1. Average Temperature RTD Input Connections**

The PD8-7000 can find the average temperature of up to 10 RTD probes connected in parallel. This new calculated value would then be treated as the PV (temperature) displayed on the meter. The average temperature is also available via Modbus communications and as the retransmitted value for the optional 4-20 mA output. The above example shows the PD8-7000 displaying the average temperature of three RTDs installed in air duct.

# Physical Features

The ProtEX-MAX is designed for ease-of-use in safe and hazardous applications. The ProtEX-MAX is housed in a rugged NEMA 4X explosion-proof enclosure available in either aluminum or stainless steel. The PD8-7000 can operate over a wide temperature range, includes removable screw terminal connectors, and features through-glass buttons for easy meter operation without the need to remove the cover. All of these features are backed by a 3-year warranty.

## Super-Bright LED Display

The ProtEX-MAX features a dual-line 6-digit display with super-bright LEDs, our brightest ever. These allow the display to be read in any lighting condition, even in direct sunlight.

## CapTouch Through-Glass Buttons

The ProtEX-MAX is equipped with four capacitive sensors that operate as through-glass buttons so that it can be programmed and operated without removing the cover (and exposing the electronics) in a hazardous area. These buttons can be disabled for security by selecting the DISABLE setting on the NO-CONTACT BUTTONS switch located on the back of the electronics module, inside the enclosure.

## Rugged, Heavy-Duty Enclosure

The ProtEX-MAX is housed in a rugged NEMA 4X, 7, & 9, IP68 aluminum or stainless steel enclosure, designed to withstand harsh environments in safe and hazardous areas.

# Wide Viewing Angle

Customers can't always look at the display from straight on, so the window and display module have been optimized to provide a wide viewing angle of approximately ±40°; nearly twice that of the competition.

## Built-In Mounting Flanges

The ProtEX-MAX is equipped with two slotted flanges for wall mounting or NPS 1½" to 2½" or DN 40 to 65 mm pipe mounting.

## Flexible Mounting & Wiring

The ProtEX-MAX features four ¾" NPT threaded conduit openings so that wiring can be routed to the most convenient conduit connection(s).

## Rotatable Display

The ProtEX-MAX rotatable display, along with four available conduit connections, provide for numerous installation options. The display can be rotated in 90° increments. Rotate it 90° for horizontal mounting.

**Vertical Mounting**     **Horizontal Mounting**

## Perfect & Secure Fit Every Time

The internal cast rails ensure the ProtEX-MAX assembles together perfectly, quickly and securely; and everything lines up for optimal viewing every time. There are no standoffs to worry about breaking or getting out of alignment. The display module snaps into the built-in rails on the enclosure making assembly a snap, while pressing the display as close to the glass as possible to improve wide angle viewing. No tools are needed to install or remove it.

## Stainless Steel Tags

PDA-SSTAG is a laser etched stainless steel tag accessory for any of your Precision Digital meters. The tag features custom text for equipment identification, instruction, or whatever else is needed in your facility. Each tag comes with a stainless steel wire and lead seal for easy mounting wherever you need it.

## Removable Screw Terminals

Industrial applications require screw terminal connections for easy field wiring, and the ProtEX-MAX goes one step further in convenience by also making them removable.

**Note:** The above photograph is representative of the back of the PD8-7000 in every regard except for the signal input connector. See *Figure 5* on page *24* for actual input signal connections.

## USB Port MeterView Pro

USB cable conveniently plugs into side of ProtEX-MAX meter
## Hazardous Area Approvals

The ProtEX-MAX is certified by CSA as Explosion-Proof / Dust-Ignition-Proof / Flame-Proof and is ATEX and IECEx certified as Dust-Ignition-Proof / Flame-Proof.

## Wide Operating Temperature Range

The ProtEX-MAX can operate from -55 to 65°C (-67 to 149°F) meaning it can be installed in a wide variety of indoor and outdoor industrial applications. And over this range, the ProtEX-MAX will drift no more than ±2°C max from 0 to 65°C ambient and ±4°C max from -20 to 0°C ambient.

# Useful Tools

## PD9501 Multi-Function Calibrator

This PD9501 Multi-Function Calibrator has a variety of signal measurement and output functions, including voltage, current, thermocouple, and RTD.

⚠ **WARNING**
- This device does not carry hazardous area approvals and is thus not suitable for location in hazardous areas.

# Specifications

*Except where noted all specifications apply to operation at +25°C.*

## General

| | |
|---|---|
| **Display** | Display Line 1: 0.60" (15.2 mm) high, red LEDs |
| | Display Line 2: 0.46" (12.0 mm) high, red LEDs |
| | 6 digits each (-99999 to 999999), with lead zero blanking |
| | Temperature displayed on line 1 with four or five-digits and F/C indication, based on configuration. |
| | Example 234.72F with 0.1° resolution and 2347°F with 1° resolution. |
| **Resolution** | 1° or 0.1° for all thermocouple and RTD inputs |
| **Display Intensity** | Eight user selectable intensity levels. Default intensity is six. |
| **Display Update Rate** | 5/second (200 ms) |
| **LED Status Indicators** | See *LED Status Indicators* on page *30* for details |
| **Overrange** | Display flashes 99999 |
| **Underrange** | Display flashes -9999 |
| **Programming Methods** | Four CapTouch through-glass buttons when cover is installed. Mechanical buttons can be used with the cover removed. Free PC-based USB MeterView Pro programming software. |
| **Noise Filter** | Programmable from 2 to 199 (0 will disable filter) |
| **Filter Bypass** | Programmable from 0.1 to 99.9% of calibrated span |
| **Recalibration** | All ranges are calibrated at the factory. Recalibration is recommended at least every 12 months. |
| **Max/Min Display** | Max/min readings reached by the process are stored until reset by the user or until power to the meter is cycled. |
| **Rounding** | Select 1, 2, 5, or 10 (e.g. rounding = 10, value = 123.45, display = 123.50) |
| **Password** | Three programmable passwords restrict modification of programmed settings. Pass 1: Allows use of function keys and digital inputs. Pass 2: Allows use of function keys, digital inputs and editing set/reset points Pass 3: Restricts all programming, function keys, and digital inputs. |
| **Non-Volatile Memory** | All programmed settings are stored in non-volatile memory for a minimum of ten years if power is lost. |
| **Power Options** | 85-265 VAC 50/60 Hz; 90-265 VDC, 20 W max; 12-24 VDC, 12-24 VAC, 15 W max. Powered over USB for configuration only. |
| **Fuse** | Required external fuse: UL Recognized, 5 A max, slow blow; up to 6 meters may share one 5 A fuse |

| | |
|---|---|
| **Normal Mode Rejection** | Greater than 60 dB at 50/60 Hz |
| **Isolation** | 4 kV input/output-to-power line 500 V input-to-output |
| **Overvoltage Category** | Installation Overvoltage Category II: Local level with smaller transient overvoltages than Installation Overvoltage Category III. |
| **Environmental** | T6 Class operating temperature range Ta = -55 to 60°C |
| | T5 Class operating temperature range Ta = -55 to 65°C |
| | Storage temperature range: -55 to 85°C (-67 to 185°F) |
| | Relative humidity: 0 to 90% non-condensing |
| **Max Power Dissipation** | Maximum power dissipation limited to 13.73 W |
| **Connections** | Power, signal, relays, mA out: Removable screw terminal blocks accept 12 to 22 AWG wire |
| | RS-485: Removable screw terminal block accepts 16 to 30 AWG wire |
| | Digital I/O: Removable screw terminal blocks accept 16 to 30 AWG wire |
| **Mounting** | Wall Mounting: Four (4) mounting holes provided for mounting meter to wall. See *Wall Mounting Instructions* on page *20* for additional details. |
| | Pipe Mounting: Optional pipe mounting kit (PDA6848) allows for pipe mounting. Sold separately. See *Pipe Mounting Instructions* on page *21* for additional details. |
| **Tightening Torque** | Power, signal, relays, mA out terminals: 5 lb-in (0.56 Nm) |
| | Digital I/O and RS-485: 2.2 lb-in (0.25 Nm) |
| **Overall Dimensions** | 6.4" x 8.0" x 8.5" (163 mm x 202 mm x 215 mm) (W x H x D) |
| **Weight** | Aluminum: 14.7 lbs (6.7 kg) |
| | Stainless Steel: 23.5 lbs (10.7 kg) |
| **Warranty** | 3 years parts & labor. See Warranty Information and Terms & Conditions on www.predig.com for complete details. |

## Temperature Input

| | |
|---|---|
| **Inputs** | Thermocouple: J, K, T, E, R, S, B, N, C RTD: 100 Ω platinum (0.00385 & 0.00392 coefficients), 10 Ω copper, 120 Ω nickel, 1000 Ω platinum (0.00385 & 0.00392 coefficients) |
| **Cold Junction Reference** | Automatic, fixed, no user calibration needed |
| **Temperature Drift** | ±2°C maximum from 0 to 65°C ambient temperature ±4°C maximum from -20 to 0°C ambient temperature |
| **Offset Adjustment** | User programmable offset adjust ±50.0 degrees. This parameter allows the user to apply an offset value to the temperature being displayed. |
| **Input Impedance** | Greater than 100 kΩ |
| **Sensor Break Detection** | Open TC or RTD sensor indicated by display flashing o$^P$Σ$_η$, relays can be programmed to go "On", "Off", or to "Ignore" (**Note:** Ignore is detected as an upscale condition). Analog output goes to the programmed sensor break value. |
| **RTD Averaging** | Up to 10 RTDs connected in parallel can be averaged. |

### Accuracy & Ranges

| Type | Range (°F) | Accuracy | Range (°C) | Accuracy |
|---|---|---|---|---|
| J | -200 to 2000 | ±1.8°F | -129 to 1093 | ±1°C |
| K | -200 to 2400 | ±1.8°F | -129 to 1316 | ±1°C |
| T | -200 to 752 | ±1.8°F | -129 to 400 | ±1°C |
| E | -200 to 1800 | ±1.8°F | -129 to 982 | ±1°C |
| R | -50 to 3000 | ±3.6°F | -46 to 1649 | ±2°C |
| S | -50 to 3000 | ±3.6°F | -46 to 1649 | ±2°C |
| B | 752 to 3300 | ±3.6°F | 400 to 1816 | ±2°C |
| N | -100 to 2300 | ±3.6°F | -73 to 1260 | ±2°C |
| C | 32 to 4100 | ±3.6°F | 0 to 2260 | ±2°C |
| 10Ω | -328 to 500 | ±0.2°F | -200 to 260 | ±0.1°C |
| 100Ω | -328 to 1562 | ±0.7°F | -200 to 850 | ±0.4°C |
| 120Ω | -110 to 500 | ±0.2°F | -79 to 260 | ±0.1°C |
| 1000Ω | -328 to 900 | ±0.7°F | -200 to 482 | ±0.4°C |
| All ranges capable of 1° or 0.1° resolution. | | | | |

## Relays

| | |
|---|---|
| **Rating** | Rating: 4 SPDT (Form C) internal and rated 3 A @ 30 VDC and 125/250 VAC resistive load, Total current: 4 A max (total of all relays), 1/14 HP (≈ 50 W) @ 125/250 VAC for inductive loads |
| **Noise Suppression** | Noise suppression is recommended for each relay contact switching inductive loads. See *Switching Inductive Loads* on page *27* for details. |
| **Deadband** | 0-100% of span, user programmable |
| **High or Low Alarm** | User may program any alarm for high or low trip point. Unused alarm LEDs and relays may be disabled (turn off). |
| **Relay Operation** | • Automatic (non-latching) and/or manual reset<br>• Latching (requires manual acknowledge) with or without clear<br>• Pump alternation control (2-4 relays)<br>• Sampling (based on set point and time)<br>• Off (disable unused relays and enable Interlock feature)<br>• Manual on/off control mode |
| **Relay Reset (Acknowledge)** | User selectable via front panel button, F4 digital input, external contact closure on digital inputs, or through serial communications. |
| **Time Delay** | 0 to 999.9 seconds, on & off relay time delays. Programmable and independent for each relay |
| **Fail-Safe Operation** | Programmable and independent for each relay. **Note:** Relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state. |
| **Auto Initialization** | When power is applied to the meter, relays will reflect the state of the input to the meter. |

## USB Connection

| | |
|---|---|
| **Function** | Programming only |
| **Compatibility** | USB 2.0 Standard, Compliant |
| **Connector Type** | Micro-B receptacle |
| **Cable** | USB A Male to Micro-B Cable |
| **Driver** | Microsoft® Windows® 10/11 |
| **Power** | USB port provides power to the meter. ***DO NOT*** apply AC or DC power to the meter while the USB port is in use. |

## Isolated 4-20 mA Output

| | |
|---|---|
| **Output Source** | PV (temperature), max, min, set points 1-4, Modbus PV input, or manual control mode |
| **Scaling Range** | 1.000 to 23.000 mA for any display range |
| **Calibration** | Factory calibrated: 0.0 to 2000.0 = 4-20 mA output |
| **Analog Out Programming** | 23.000 mA maximum for all parameters: Overrange, underrange, max, min, and break |
| **Accuracy** | ± 0.1% of span ± 0.004 mA |
| **Temperature Drift** | 0.4 µA/°C max from 0 to 65°C ambient, 0.8 µA/°C max from -20 to 0°C ambient **Note:** Analog output drift is separate from input drift. |
| **Power Supply for Analog Output Loop** | Terminals I+ & R: 24 VDC ± 10%. Used to power the 4-20 mA output. All models rated @ 25 mA max. |
| **External Loop Power Supply** | 35 VDC maximum |

| Output Loop Resistance | Power supply | Minimum | Maximum |
|---|---|---|---|
| | 24 VDC | 10 Ω | 700 Ω |
| | 35 VDC (external) | 100 Ω | 1200 Ω |

## RS-485 Serial Communications

| | |
|---|---|
| **Compatibility** | EIA-485 |
| **Connectors** | Removable screw terminal connector |
| **Max Distance** | 3,937' (1,200 m) max |
| **Status Indication** | Separate LEDs for Power (P), Transmit (TX), and Receive (RX) |

## Modbus RTU Serial Communications

| | |
|---|---|
| **Slave Id** | 1 – 247 (Meter address) |
| **Baud Rate** | 300 – 19,200 bps |
| **Transmit Time Delay** | Programmable between 0 and 199 ms |
| **Data** | 8 bit (1 start bit, 1 or 2 stop bits) |
| **Parity** | Even, Odd, or None with 1 or 2 stop bits |
| **Byte-To-Byte Timeout** | 0.01 to 2.54 sec |
| **Turn Around Delay** | Less than 2 ms (fixed) |

**Note:** Refer to the ProtEX-MAX Modbus Register Tables located at www.predig.com for details.

## Digital Input (F4)

| | |
|---|---|
| **Function** | Remote operation of front-panel buttons, acknowledge/reset relays, reset max/min values. See *Function Keys & Digital I/O Available Settings* on page *49* for a complete list of capabilities. |
| **Contacts** | 3.3 VDC on contact. Connect normally open contacts across F4 to COM |
| **Logic Levels** | Logic High: 3 to 5 VDC Logic Low: 0 to 1.25 VDC |

## Digital Inputs & Outputs

| | |
|---|---|
| **Function** | Terminals provided for remote operation of all four programming / operation buttons. Other uses include acknowledge/reset relays and reset max/min values. See *Function Keys & Digital I/O Available Settings* on page *49* for a complete list of capabilities. |
| **Channels** | 5 digital inputs & 4 digital outputs |
| **Digital Input Logic High** | 3 to 5 VDC |
| **Digital Input Logic Low** | 0 to 1.25 VDC |
| **Digital Output Logic High** | 3.1 to 3.3 VDC |
| **Digital Output Logic Low** | 0 to 0.4 VDC |
| **Source Current** | 10 mA maximum output current |
| **Sink Current** | 1.5 mA minimum input current |
| **+5 V Terminal** | To be used as pull-up for digital inputs only. Connect normally open push buttons across +5 V & DI 1-4. |

⚠ **WARNING**

- **DO NOT** use +5 V terminal to power external devices.

## MeterView Pro Software

| | |
|---|---|
| **Availability** | Download directly from meter or from www.predig.com/meterviewpro |
| **System Requirements** | Microsoft® Windows® 10/11 |
| **Communications** | USB 2.0 (for programming only) (USB A Male to Micro-B Cable) RS-485 to USB converter (programming, monitoring, and data logging) |
| **Configuration** | Configure meters one at a time |
| **Power** | USB port provides power to the meter. ***DO NOT*** apply AC or DC power to the meter while the USB port is in use. |

## Enclosure

| | |
|---|---|
| **Material** | AL Models:<br>ASTM A413 LM6 die-cast aluminum, copper-free, enamel coated<br>SS Models:<br>ASTM A743 CF8M investment-cast 316 stainless steel |
| **Gasket** | Fluoroelastomer |
| **Rating** | NEMA 4X, IP68 Explosion-proof |
| **Color** | AL: Blue<br>SS: Silver |
| **Window** | Borosilicate glass |
| **Conduits** | Four ¾" NPT threaded conduit openings |
| **Conduit Stopping Plugs** | Sold separately |
| **Flanges** | Two built-in flanges for wall and pipe mounting |
| **Tamper-Proof Seal** | Cover may be secured with tamper-proof seal |
| **Overall Dimensions** | 6.4" x 8.0" x 8.5"<br>(163 mm x 202 mm x 215 mm)<br>(W x H x D) |
| **Weight** | AL: 14.7 lbs (6.7 kg)<br>SS: 23.5 lbs (10.7 kg) |
| **ATEX** | ⟨Ex⟩ II 2 G D<br>Ex db IIC Gb<br>Ex tb IIIC Db<br>IP66/IP68<br>Tamb: -55°C to +85°C<br>Certificate Number: Sira 19ATEX1252U |

| | Certificate Number: IECEx SIR 12.0073X |

***ATEX/IECEx Specific Conditions of Use:***

1. The equipment label and epoxy coating may generate an ignition-capable level of electrostatic charges under certain extreme conditions. The user should ensure that the equipment is not installed in a location where it may be subjected to external conditions (such as high-pressure steam) which might cause a build-up of electrostatic charges on non-conducting surfaces. Additionally, cleaning of the equipment should be done only with a damp cloth.

2. Flameproof joints are not intended to be repaired.

3. All entry closure devices shall be suitably certified as "Ex d", "Ex t" and "IP66/68" as applicable. Suitable thread sealing compound (non-setting, non-insulating, non-corrosive, not solvent based, suitable for the ambient rating) must be used at the NPT conduit entries to achieve the IPx8 rating while maintaining the Ex protection concept.

### Year of Construction
This information is contained within the serial number with the first four digits representing the year and month in the YYMM format.

### For European Community
The ProtEX-MAX must be installed in accordance with the ATEX directive 2014/34/EU, the product manual, and the product certificate Sira 12ATEX1182X.

# EU Declaration of Conformity

For shipments to the EU and UK, a Declaration of Conformity was printed and included with the product. For reference, a Declaration of Conformity is also available on our website www.predig.com/docs.

# Safety Information

> ⚠ **CAUTION**
- Read complete instructions prior to installation and operation of the meter.

> ⚠ **WARNINGS**
- Risk of electric shock or personal injury.
- Hazardous voltages exist within enclosure. Installation and service should be performed only by trained service personnel. Service requiring replacement of internal components must be performed at the factory.
- In hazardous areas, conduit and conduit/stopping plugs require the application of non-setting (solvent free) thread sealant. It is critical that all relevant hazardous area guidelines be followed for the installation or replacement of conduit or plugs.

# Installation

*Install in accordance with applicable local and national regulations (e.g. NEC).*

**For Installation in USA**
The ProtEX-MAX must be installed in accordance with the National Electrical Code (NEC) NFPA 70.

**For Installation in Canada**
The ProtEX-MAX must be installed in accordance with the Canadian Electrical Code CSA 22.1. All power supplies below 36 V and all signal input circuits must be supplied from a CSA Certified Class 2 source.

**For European Community**
The ProtEX-MAX must be installed in accordance with the ATEX directive 2014/34/EU, the product manual, and the product certificate Sira 12ATEX1182X.

> ⚠ **WARNINGS**
- Disconnect from supply before opening enclosure.
- Keep cover tight while circuits are live.
- Conduit seals must be installed within 18" (450 mm) of the enclosure.
- Use suitably certified and dimensioned cable entry device and/or plug.
- Cable must be suitable for 90°C.

Wiring connectors are accessed by opening the enclosure. To access electrical connectors, remove the electronics module. Connectors are on the rear of the electronics module.

# Unpacking

Remove the meter from box. Inspect the packaging and contents for damage. Report damages, if any, to the carrier.

If any part is missing or the meter malfunctions, please contact your supplier or the factory for assistance.

# Cover Jam Screw

The cover jam screw should be properly installed once the meter has been wired and tested in a safe environment. The cover jam screw is intended to prevent the removal of the meter cover in a hazardous environment without the use of tools. Using a M2 hex wrench, turn the screw clockwise until the screw contacts the meter. Turn the screw an additional 1/4 to 1/2 turn to secure the cover.

> ⚠ **CAUTION**
- Excess torque may damage the threads, screw head, and wrench.

# Mounting

The ProtEX-MAX has two slotted mounting flanges that may be used for pipe mounting or wall mounting.

Refer to *Figure 2* and *Figure 3* below.

⚠ **WARNING**

- Do not attempt to loosen or remove flange bolts while the meter is in service.

## Mounting Dimensions

All units: inches (mm)

**Figure 2. Enclosure Dimensions – Front View**

**Figure 3. Enclosure Dimensions –
Side Cross Section View**

## Wall Mounting Instructions

The meter can be mounted to any wall or flat surface using the four provided mounting holes located in the built-in flanges. In addition, the internal electronic assembly can be rotated to allow the enclosure to be mounted in any position. To mount the meter to a wall, follow these instructions:

- Prepare a section of wall approximately 7.0" x 8.5" (178 mm x 216 mm) for meter mounting by marking with a pencil the mounting holes (shown in *Figure 2*) on the wall.
- Select the appropriate mounting screws for the mounting surface to be used. The mounting holes diameter is shown on *Figure 2*.
  **Note:** Mounting screws are not included.
- Using a drill bit slightly smaller than the girth of the mounting screws, pre-drill holes at the mounting locations previously marked.
- Insert mounting screws into the four mounting holes and screw them into the pre-drilled holes.

## Pipe Mounting Instructions

The meter can also be mounted to a pipe using an optional U-Bolt kit. This kit includes two U-bolts, the necessary hardware, and is available in 316 stainless steel (PDA6848-SS)

To mount the meter using a U-Bolt kit, follow these instructions:

- Orient the groove on the back of the instrument with the pipe and secure it to the pipe with the two U-bolts and hardware provided.

## Vertical Pipe Mounting

## Horizontal Pipe Mounting

## Installation Overview

We recommend the following sequence for getting the meter into service:

1. **DO NOT** apply AC or DC power to the meter.
2. Connect the meter to the PC with the USB cable provided. **DO NOT** use a different USB cable.
3. If MeterView Pro (MVPro) is already installed in your computer, then the program will launch automatically in most systems. If the program does not start automatically, double-click on the MVPro icon.
4. If MVPro is not installed, follow the instructions provided below.
5. Use MVPro to configure the meter for your application.
6. Disconnect the USB cable from the meter.
7. Apply power and signal and check operation of the meter.
8. Install the meter and put into service.
9. Make any programming adjustments using the programming buttons.

## MeterView Pro Software

The easiest and quickest way to program your ProtEX-MAX meter is to use the FREE MeterView Pro programming software. This software is loaded into the meter and connects and installs directly to your PC with the USB cable provided. **DO NOT** use a different USB cable. We recommend that the first thing you do after taking the meter out of the box is connect the ProtEX-MAX to your PC with the provided USB cable. **DO NOT** apply AC or DC power to the meter while your PC is connected to the meter as it will disrupt the USB connection. It is not necessary to apply an input signal.

MeterView Pro programming software is intuitive, and most customers can get their meter programmed as they like without even looking in the manual.

> **Watch MeterView Pro Software Video at**
> **www.predig.com/meterviewpro**

### MeterView Pro Installation

1. Connect one end of the provided USB cable to the meter and the other end to the computer. The computer will automatically install the driver software it needs to talk to the meter. Follow the on-screen instructions and allow sufficient time for the process to complete. This can take a few minutes. If the process is interrupted, then it could leave the system in an unstable condition.
⚠ **WARNINGS**

- Only one meter may be connected at a time. Attaching multiple meters will cause a conflict with the meter software.
- **DO NOT** apply AC or DC power to the meter when using the USB connection.
- When using the USB connection, the meter should only be connected to a computer when both devices are in a non-hazardous area.

2. Once the driver is installed, an AutoPlay dialog should appear for the drive "MAINSTAL." Click "Open folder to view files."

If the computer does not display an AutoPlay dialog for the drive "MAINSTAL," you should open My Computer and double-click on the drive labeled "MAINSTAL."

3. Double-click on the file named "MAStart." The program will open a few windows and install two programs on your computer. Simply follow the on-screen instructions until you see one of the dialogs below. If you receive a "User Account Control" warning, click "Yes."

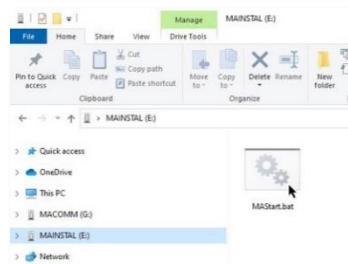

4. If there is an update available, click the "Update" button to install the new version. Otherwise, click "Configure" to begin programming your meter.

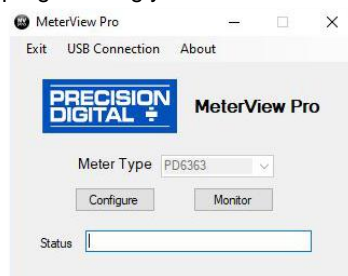

> **Note:** If you decide to update your MeterView Pro software, once the installation has completed, you will be asked if you want to update the setup files located on the meter itself. This way, you will always have the most current version on the meter for future installs.

⚠ **WARNING**

- **DO NOT** unplug the meter while the new installation files are being written to it. The meter will display ʊɔr ıƚε during the process and you will receive an on-screen notification once the process is complete.
- **DO NOT** disconnect and reconnect the meter rapidly. Allow at least 10 seconds from disconnection before reconnecting USB to the meter.

## Connections

All connections are made to removable screw terminal connectors located at the rear of the meter.

⚠ **CAUTION**

• Use copper wire with 60°C or 60/75°C insulation for all line voltage connections. Observe all safety regulations. Electrical wiring should be performed in accordance with all applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.

⚠ **WARNINGS**

• Observe all safety regulations. Electrical wiring should be performed in accordance with all agency requirements and applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.
• Static electricity can damage sensitive components.
• Observe safe handling precautions for static-sensitive components.
• Use proper grounding procedures/codes.
• If the instrument is installed in a high voltage environment and a fault or installation error occurs, high voltage may be present on any lead or terminal.
• Follow all fusing and wiring precautions requirements for the instrument integrated to the PD8 Series model number being connected.

To access the connectors, remove the enclosure cover. The electronics module is snapped into the back of the enclosure and is removed by pulling it straight out. Signal connections are made to de-pluggable connectors on the back of the electronics module.

Some connectors may be provided already connected. These connections are required for proper operation of the ProtEX-MAX and should not be removed unless instructed to by this manual.

Grounding connections are made to the two ground screws provided on the base – one internal and one external.

After all connections have been completed and verified, apply power to the unit.

### Required & Factory Wired Connection

The ProtEX-MAX comes with a pre-wired connection. This connection is detailed below and must be maintained in order for the instrument to function properly.

**Figure 4. Integrated PROVU Required Connections**

## P**RO**V**U** Electronics Module Layout for PD8-7000-6H7 and PD8-7000-7H7*

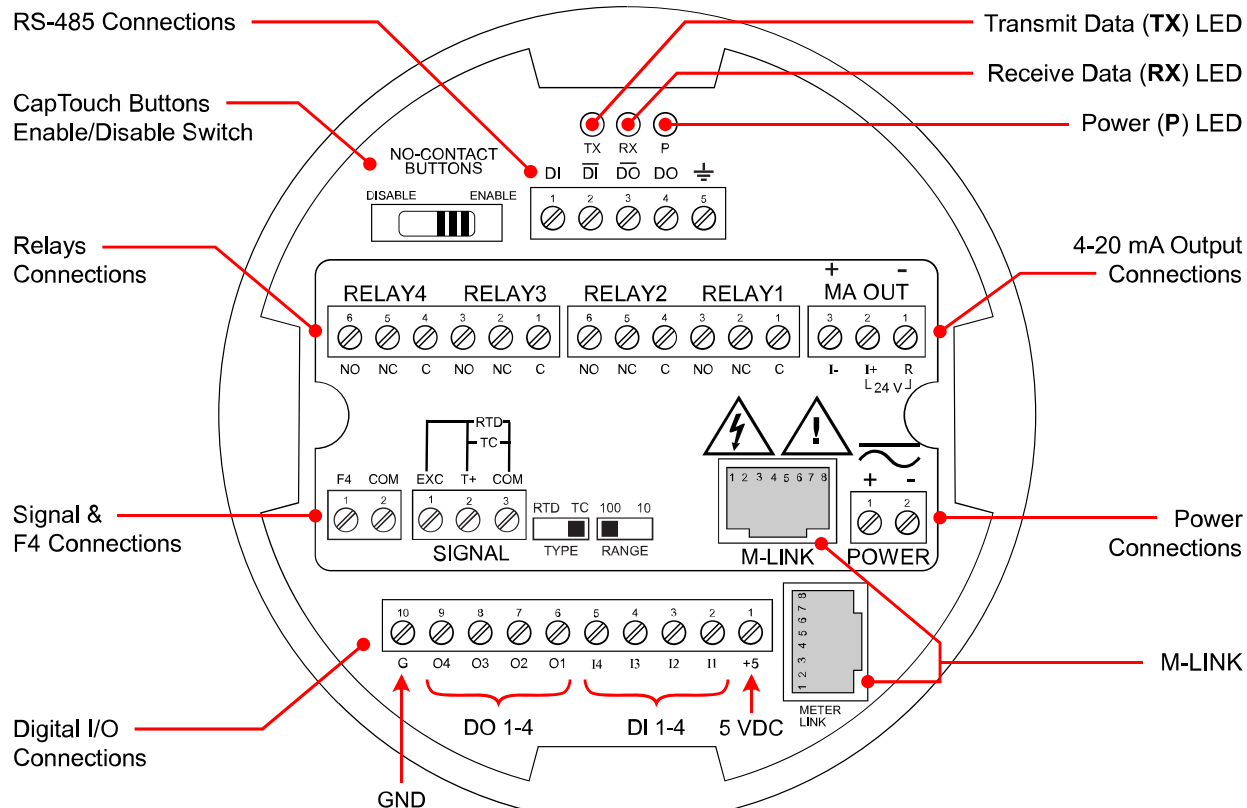

* For models PD8-7000-6H0 and PD8-7000-7H0 the upper set of connectors (RELAYs & MA OUT) are not present
**Figure 5. P**RO**V**U** Electronics Module Layout**

### USB Connection

**Figure 6. USB Connection**

⚠️ **WARNINGS**

- **DO NOT** disconnect the RJ45 M-LINK connector cable. Otherwise the instrument will not function properly.
- The meter should only be connected to a computer while it is located in a safe area.

## Power Connections

Power connections are made to a two-terminal connector labeled POWER. The meter will operate regardless of DC polarity connection. The + and - symbols are only a suggested wiring convention. There are separate models for low voltage and high voltage power. See *Ordering Information* on page *7* for details.

POWER

AC or DC
POWER
Required External Fuse:
5 A max, 250 V Slow Blow

**Figure 7. Power Connections**

### Signal Connections

Signal connections are made to a three-terminal connector labeled SIGNAL.

#### Thermocouple and RTD Connections

The following figures show examples for thermocouple and RTD connections.

The TYPE selector switch must be set to the proper position for the meter to accept the selected RTD or TC input.

The RANGE selector switch is used to select 100-ohm platinum or 10-ohm copper RTD. The 1000-ohm platinum RTD input uses the same setting as the 100-ohm RTD.

The input type is selected using the *Setup* menu.

The selected thermocouple input must correspond to the thermocouple sensor and wire type used.

The meter accepts two, three, or four-wire RTDs. The three-wire RTD connection has built-in lead wire compensation.

Lead wire compensation for two-wire RTDs can be applied using the *Adjust* menu. See the *Advanced Features Menu* on page *45*.

The four-wire RTD connection is similar to the three-wire. One of the leads of a four-wire RTD is not connected and may be clipped off.

The three-wire connection provides sufficient lead wire compensation to obtain accurate readings even with long leads.

#### Connections for Averaging RTD Sensors

To obtain the average temperature from 2 to 10 RTD sensors, connect all the sensors in parallel and select the number of sensors in the *RTD Total* (ɾʈdʈɑʈ) menu. See the *Advanced Features Menu* on page *45*.

**Figure 8. Thermocouple Input Connections**

**Figure 9. Three-Wire RTD Input Connections**

**Figure 10. Two-Wire RTD Input Connections**

**Figure 11. Four-Wire RTD Input Connections**

## Relay Connections

Relay connections are made to two six-terminal connectors labeled RELAY1 – RELAY4. Each relay's C terminal is common only to the normally open (NO) and normally closed (NC) contacts of the corresponding relay. The relays' C terminals should not be confused with the COM (common) terminal of the INPUT SIGNAL connector.

**Figure 12. Relay Connections**

## Interlock Relay Feature

As the name implies, the interlock relay feature reassigns one, or more, alarm/control relays for use as interlock relay(s). Interlock contact(s) are wired to digital input(s) and activate the interlock relay. This feature is enabled by configuring the relay, and the corresponding digital input(s), see *Setting Up the Interlock Relay (Force On) Feature* on page *41*.

In the example below, an Interlock Contact switch is connected to a digital input, which will be used to force on (energize) the Interlock Relay. The Interlock Relay and the Control Relay are connected in series with the load.

- When the Interlock Contact is closed (safe), the Interlock Relay energizes, allowing power to flow to the Control Relay; the corresponding front panel LED is on.
- When the Interlock Contact is open, the corresponding front panel LED flashes (locked out), the Interlock Relay is de-energized, preventing power from flowing to the Control Relay and the load.

**Figure 13. Interlock Connections**

## Switching Inductive Loads

The use of snubbers to suppress electrical noise is strongly recommended when switching inductive loads to prevent disrupting the microprocessor's operation. The snubbers also prolong the life of the relay contacts. Suppression can be obtained with resistor-capacitor (RC) networks assembled by the user or purchased as complete assemblies. Refer to the following circuits for RC network assembly and installation:

**Figure 14. AC and DC Loads Protection**

Choose R and C as follows:

R: 0.5 to 1 Ω for each volt across the contacts

C: 0.5 to 1 µF for each amp through closed contacts

**Notes:**
1. Use capacitors rated for 250 VAC.
2. RC networks may affect load release time of solenoid loads. Check to confirm proper operation.
3. Install the RC network at the meter's relay screw terminals. An RC network may also be installed across the load. Experiment for best results.

Use a diode with a reverse breakdown voltage two to three times the circuit voltage and forward current at least as large as the load current.

**Figure 15. Low Voltage DC Loads Protection**

## RC Networks (Snubbers) Available from Precision Digital

RC networks are available from Precision Digital and should be applied to each relay contact switching an inductive load. Part number: PDX6901.

**Note:** Relays are de-rated to 1/14th HP (50 watts) with an inductive load.

## RS-485 Connections

The RS-485 connections are made to a five terminal connector used for Modbus RTU serial communications. The RS-485 terminals include Transmit Data (DO) and (/DO), Receive Data (DI) and (/DI), and Signal Ground. See *Modbus RTU Serial Communications* (5Er iAL) on page *47* for more information.

There are three diagnostic LEDs: Transmit Data (TX), Receive Data (RX) and Power (P) to show when the meter is transmitting and receiving data from other devices.
**Figure 16. RS-485 Diagnostic LEDs**

## RS-485 Multi-Drop Connection

When using more than one meter in a multi-drop mode, each meter must be provided with its own unique address. The meter address (Slave ID) can be programmed between 1 and 247. The transmit delay can be set between 0 and 199 ms. The parity can be set to even, odd, or none with 1 or 2 stop bits.

**To change the meter address:**
1. Press and hold the Menu button for three seconds to access Advanced Features menu of the meter.
2. Press Up arrow until Serial (5Er iAL) menu is displayed and press Enter, RddrES is displayed.
3. Press Enter to change meter address using Right and Up arrow buttons. Press Enter to accept.
4. Press Menu button to exit and return to Run Mode.

### Three-Wire Connection

In order to wire the five pins for use as a three-wire half-duplex RS-485 connection, it is necessary to create a jumper connection between DI to DO and /DI to /DO- as shown below.
**Figure 17. Three-Wire RS-485 Connection**

## Digital I/O Connections

The ProtEX-MAX has a 10-position terminal block for connecting digital inputs and outputs.
**Figure 18. Digital Input and Output Connections**

> ⚠ **IMPORTANT**
>
> The onboard digital inputs (1-4) are configured at the factory to function identically to the front panel pushbuttons (Menu, F1, F2, & F3) in order to work with the CapTouch buttons. Changing the programming of the digital inputs will affect the function of the CapTouch buttons.
>
> If you wish to change the behavior of the digital inputs, re-assign F1-F3 to the desired function, then change the corresponding digital input to match.

> ⚠ **WARNING**
>
> - **DO NOT** disconnect the RJ45 M-LINK connector cable. Otherwise the instrument will not function properly.

## F4 Digital Input Connections

A digital input, F4, is standard on the meter. This digital input should be connected with a normally open closure across F4 and COM, or with an active low signal applied to F4. It can be used for remote operation of front-panel buttons, to acknowledge/reset relays, or to reset max/min values. See *Function Keys & Digital I/O Available Settings* on page *49* for a complete list of capabilities.
**Figure 19. F4 Digital Input Connections**

## 4-20 mA Output Connections

Connections for the 4-20 mA output are made to the connector terminals labeled mA OUT. The 4-20 mA output may be powered internally or from an external power supply.

**Figure 20. 4-20 mA Output Connections**

## Analog Output Power Supply

The internal 24 VDC power supply powering the analog output may be used to power other devices, if the analog output is not used. The I+ terminal is the +24 V and the R terminal is the return.

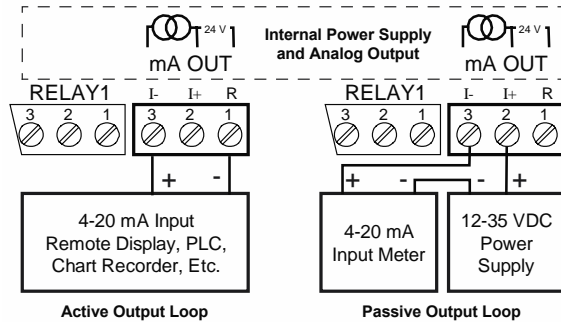

**Figure 21. Analog Output Supply Powering Other Devices**

## Remote Programming

The meter can be operated via the programming buttons or a remote control station with required approvals to be located in a hazardous area using the digital inputs.

# Setup and Programming

There is **no need to recalibrate** the meter when first received from the factory. Simply select the input type, ⁰F or ⁰C, and decimal point.

The meter is **factory calibrated** prior to shipment to read temperature in degrees Fahrenheit with calibration equipment that is certified to NIST standards..

## Overview

There are two switches, located at the back of the meter, to set the input selection for TC or RTD and for 100-ohm platinum or 10-ohm copper. The 1000-ohm RTD input uses the same setting as the 100-ohm.

Setup and programming is done using MeterView Pro or through the programming buttons.

After power and input signal connections have been completed and verified, apply power to the meter.

## LED Status Indicators

| LED | State | Indication |
|---|---|---|
| 1-4 | Steady | Alarm condition based on set and reset points, independent of relay status in certain configurations. (Available on all meter configurations, including those without relays installed) |
| 1-4 | Flashing | Relay interlock switch open |
| 1-4 & M | Flashing | Relay in manual control mode |
| M | Flashing | Analog output in manual control mode |

## Programming Buttons

| Button Symbol | Description |
|---|---|
| MENU / MENU | Press to enter or exit Programming Mode, view settings, or exit max/min readings |
| F1 / F1 | Press to reset max/min readings or other parameter/function assigned through the *User* menu |
| F2 / F2 | Press to display max/min readings or other parameter/function assigned through the *User* menu |
| F3 / F3 | Press to acknowledge relays or other parameters/function assigned through the *User* menu |

- Press the Menu button to enter or exit the Programming Mode at any time.
- Press the Right arrow button to move to the next digit during digit or decimal point programming.
- Press or hold the Up arrow button to scroll through the menus, decimal point, or to increment the value of a digit.
- Press the Enter button to access a menu or to accept a setting.
- Press and hold the Menu button for three seconds to access the advanced features of the meter.

## CapTouch Buttons

The ProtEX-MAX is equipped with four capacitive sensors that operate as through-glass buttons so that they can be operated without removing the cover (and exposing the electronics) in a hazardous area or harsh environment.

CapTouch buttons are designed to protect against false triggering and can be disabled for security by selecting DISABLE on the switch labeled NO-CONTACT BUTTONS located on the connector board.

To actuate a button, press one finger to the window directly over the marked button area. When the cover is removed or replaced, the CapTouch buttons can be used after the meter completes a self-calibrating routine. The sensors are disabled when more than one button is pressed, and they will automatically re enable after a few seconds. When the cover is removed, the four mechanical buttons located on the right of the faceplate are used.

The CapTouch Buttons are configured by default to duplicate the function of the front panel mechanical pushbuttons associated with the integrated meter.

### CapTouch Button Tips:
- Keep the glass window clean.
- Tighten the cover securely.
- Use a password to prevent tampering.

# Display Functions & Messages

The meter displays various functions and messages during setup, programming, and operation. The following table shows the main menu functions and messages in the order they appear in the menu.

## Display Functions & Messages

| Display | Parameter | Action/Setting Description |
|---|---|---|
| 5EtuP | Setup | Enter *Setup* menu |
| InPut | Input | Enter *Input* selection menu |
| tc | TC | Set meter for thermocouple input J, K, T, E, R, S, B, N, C |
| rtd | RTD | Set meter for RTD input 100Pt, 1000Pt, 10Cu, 120Ni |
| A385 | A385 | Set meter for 0.00385 curve |
| A392 | A392 | Set meter for 0.00392 curve |
| F or C | F or C | Press Enter to select degrees F or C |
| un it5 | Units | Select the display units/tags |
| dEc Pt | Decimal point | Set decimal point dddd, ddddd, dddd°F, dddddF |
| d5PLAY | Display | Enter the *Display* menu |
| L inE 1 | Line 1 | Press Enter to assign the upper display parameter (default: PV - temperature) |
| L inE 2 | Line 2 | Press Enter to assign the lower display parameter (default: engineering units) |
| d-IntY | Display intensity | Set display intensity level from 1 to 8 |
| rELAY | Relay | Enter the *Relay* menu |
| rLY 1 | Relay 1 | Relay 1 setup |
| Act 1 | Action 1 | Set relay 1 action |
| Auto | Automatic | Set relay for automatic reset |
| A-nAn | Auto-manual | Set relay for automatic & manual reset any time |
| LAtcH | Latching | Set relay for latching operation |
| Lt-CLr | Latching-cleared | Set relay for latching operation with manual reset only after alarm condition has cleared |
| ALtErn | Alternate | Set relay for alternation control |
| 5AnPL | Sampling | Set relay for sampling operation |

## Display Functions & Messages

| Display | Parameter | Action/Setting Description |
|---|---|---|
| OFF | Off | Disable relay and front panel status LED (Select Off to enable Interlock feature) |
| 5Et 1 | Set 1 | Program set point 1 |
| r5t 1 | Reset 1 | Program reset point 1 |
| rLY 2 | Relay 2 | Relays 2-4 setup |
| FA iL5F | Fail-safe | Enter *Fail-safe* menu |
| FL5 1 | Fail-safe 1 | Set relay 1 fail-safe operation |
| on | On | Enable fail-safe operation |
| oFF | Off | Disable fail-safe operation |
| FL5 2 | Fail-safe 2 | Set relays 2-4 fail-safe operation |
| dELAY | Delay | Enter relay *Time Delay* menu |
| dLY 1 | Delay 1 | Enter relay 1 time delay setup |
| On 1 | On 1 | Set relay 1 On time delay |
| OFF 1 | Off 1 | Set relay 1 Off time delay |
| dLY 2 | Delay 2 | Enter relays 2-4 time delay setup |
| brEAH | Break | Set relay condition if input break detected |
| iGnorE | Ignore | Ignore input break condition (Processed as an upscale condition) |
| On | On | Relay goes to alarm condition when input break is detected |
| OFF | Off | Relay goes to non-alarm condition when input break is detected |
| Aout | Analog output | Enter the *Analog output* scaling menu |
| d i5 1 | Display 1 | Program display 1 value |
| Out 1 | Output 1 | Program output 1 value (e.g. 4.000 mA) |
| d i5 2 | Display 2 | Program display 2 value |
| Out 2 | Output 2 | Program output 2 value (e.g. 20.000 mA) |
| rE5Et | Reset | Press Enter to access the *Reset* menu |
| r5t H i | Reset high | Press Enter to reset max display |
| r5t Lo | Reset low | Press Enter to reset min display |
| r5t HL | Reset hi/low | Press Enter to reset max & min displays |

32

## Display Functions & Messages

| Display | Parameter | Action/Setting Description |
|---|---|---|
| ContrL | Control | Enter Control menu |
| Auto | Automatic | Press Enter to set meter for auto operation |
| mAn | Manual | Press Enter to manually control relays or analog output operation |
| PASS | Password | Enter the Password menu |
| PASS 1 | Password 1 | Set or enter Password 1 |
| PASS 2 | Password 2 | Set or enter Password 2 |
| PASS 3 | Password 3 | Set or enter Password 3 |
| unLoc | Unlocked | Program password to lock meter |
| Locd | Locked | Enter password to unlock meter |
| 99999 -9999 | Flashing display | Overrange condition Underrange condition |
| OPEn | Open | Open sensor indication |

# Main Menu

The main menu consists of the most commonly used functions: *Setup, Reset, Control, and Password.*

- Press Menu button to enter Programming Mode then press the Up arrow button to scroll main menu.
- Press Menu, at any time, to exit and return to Run Mode. Changes made to settings prior to pressing Enter are not saved.
- Changes to the settings are saved to memory only after pressing Enter/F3.
- The display moves to the next menu every time a setting is accepted by pressing Enter/F3.
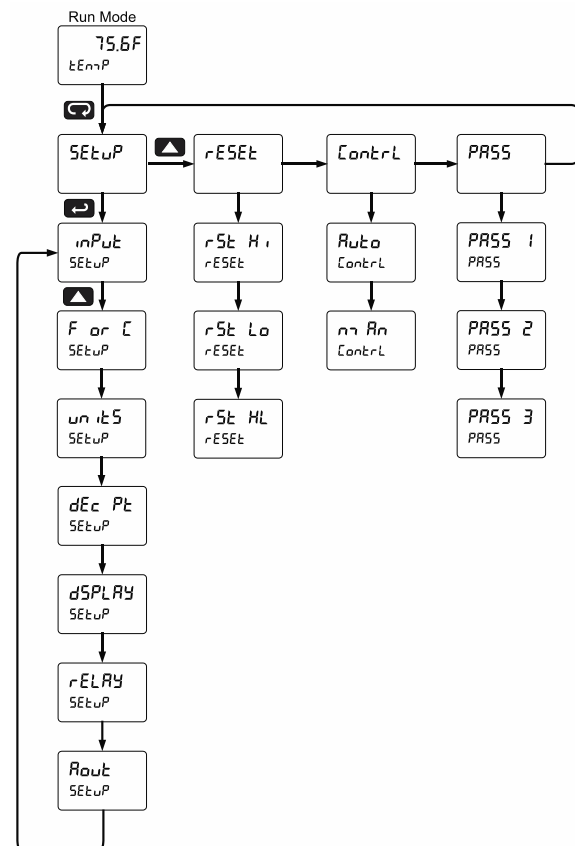

# Setting Numeric Values

The numeric values are set using the Right and Up arrow buttons. Press Right arrow to select next digit and Up arrow to increment digit value.

The digit being changed is displayed brighter than the rest.

Press and hold up arrow to auto-increment the display value.

Press the Enter button, at any time, to accept a setting or Menu button to exit without saving changes.

# Setting Up the Meter (5EtuP)

The *Setup* menu is used to select:

1.  Input type the meter will accept
2.  Degrees F or C
3.  Select the display units/tags
4.  Decimal point position and F or C indication
5.  Display parameter and intensity
6.  Relay operation
7.  4-20 mA analog output scaling

Press the Enter button to access any menu or press Up arrow button to scroll through choices. Press the Menu button to exit at any time.

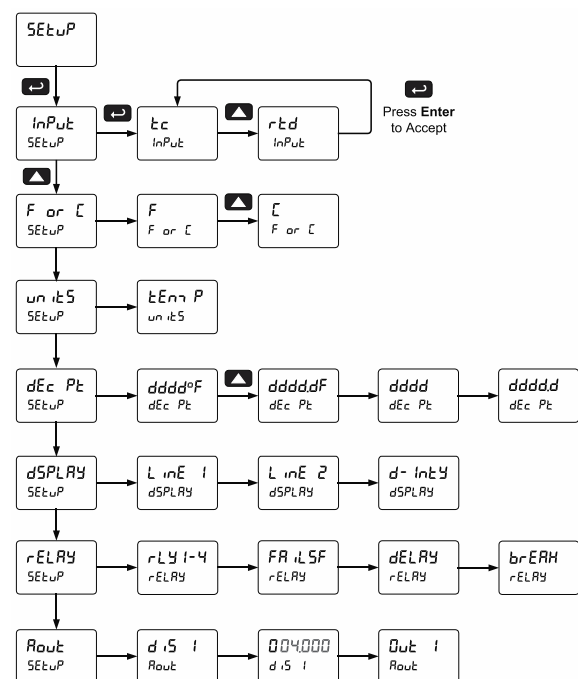

# Setting the Input Signal ( InPut )

Enter the *Input* menu to set up the meter to accept thermocouple (tc) or RTD (rtd) inputs. The Type selector switch, located at the rear of the meter, must be set accordingly.

The thermocouple input is capable of accepting various types of thermocouples.

The RTD input is capable of accepting various types of RTD sensors. After selecting 100 Pt or 1000Pt, it is necessary to select either A385 (0.00385) or A392 (0.00392) coefficient.

## Selecting the Temperature Scale (F or C)

The meter can display the temperature in degrees Fahrenheit or Celsius.

## Setting the Decimal Point (dEc Pt)

The temperature may be displayed with one decimal or with no decimal point. The temperature scale can also be displayed with the reading. The degree symbol is available only with no decimal point selected.

Pressing the Up arrow scrolls the decimal point and temperature format selections.

## Setting the Display Parameter & Intensity (dSPLAY)

Display line 1 (L ınE 1) can be programmed to display:

1. Process value
2. Relay set points
3. Max & min values
4. Modbus input
5. Display reading and units

Display line 2 (L ınE 2) can be programmed to display:

1. Process value
2. Relay set points
3. Max & min values
4. Engineering units or custom legends
5. Modbus input
6. Off (no display)
7. Display reading and units

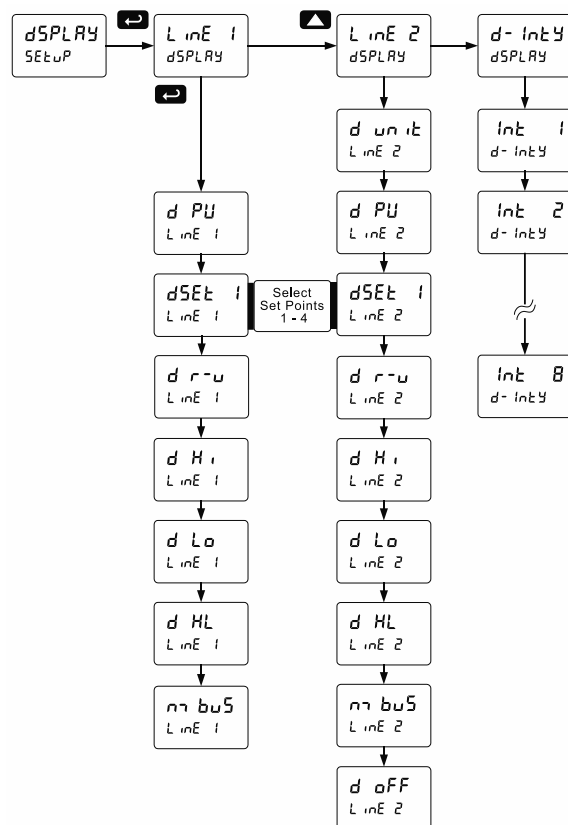

Press the Up arrow to change selection, press Enter to accept setting, and press Menu to exit programming

After setting up the input and display, press the Menu button to exit programming and skip the rest of the setup menu. Press the Menu button again and the Up arrow to reach the *Setup* menu again and complete the setup of the meter.

## Display Intensity (d-ıntY)

The meter has eight display intensity levels to give the best performance under various lighting conditions. Select intensity 8 for outdoor applications. The default intensity is 6.

## Setting the Display Units or Custom Tags (unıtS)

Enter the display unit or custom tag that will be displayed if units is selected in the unıtS menu, or d unıt is selected as the Lower display parameter. See the *Setting the Display Parameter & Intensity* (dSPLAY) flow chart on page *35* to access the display menu to show the unit or tag on the Lower display. The engineering units or custom legends can be set using the following 7-segment character set:

| Display | Character | | Display | Character |
|---------|-----------|---|---------|-----------|
| 0 | 0 | | H | K |
| 1 | 1 | | L | L |
| 2 | 2 | | m | m |
| 3 | 3 | | n | n |
| 4 | 4 | | O | O |
| 5 | 5 | | o | o |
| 6 | 6 | | P | P |
| 7 | 7 | | q | q |
| 8 | 8 | | r | r |
| 9 | 9 | | S | S |
| A | A | | t | t |
| b | b | | u | u |
| C | C | | V | V |
| c | c | | w | w |
| d | d | | X | X |
| E | E | | Y | Y |
| F | F | | Z | Z |
| G | G | | - | - |
| g | g | | / | / |
| H | H | | ] | ] |
| h | h | | [ | [ |
| I | I | | = | = |
| i | i | | Degree(<) | Degree(<) |
| J | J | | | Space |

**Notes:**

1. Degree symbol represented by (<) if programming with MeterView Pro.
2. The letters "m" and "w" use two 7-segment LEDs each; when selected the characters to the right are shifted one position.
3. Press and hold up arrow to auto-scroll the characters in the display.

## Setting the Relay Operation (rELAY)

This menu is used to set up the operation of the relays.

⚠️ **CAUTION**

- During setup, the relays do not follow the input and they will remain in the state found prior to entering the Relay menu.

1. Relay action
   a. Automatic reset only (non-latching)
   b. Automatic + manual reset at any time (non-latching)
   c. Latching (manual reset only)
   d. Latching with Clear (manual reset only after alarm condition has cleared)
   e. Relay alternation control (automatic reset only)
   f. Sampling (the relay is activated for a user-specified time)
   g. Off (relay disabled and Interlock feature enabled)
2. Set point
3. Reset point
4. Fail-safe operation
   a. On (enabled)
   b. Off (disabled)
5. Time delay
   a. On delay (0-999.9 seconds)
   b. Off delay (0-999.9 seconds)
6. Relay action for loss (break) of input (ignore, on, off)

Note: The setup of relays 2-4 follows the same pattern shown here for relay 1.
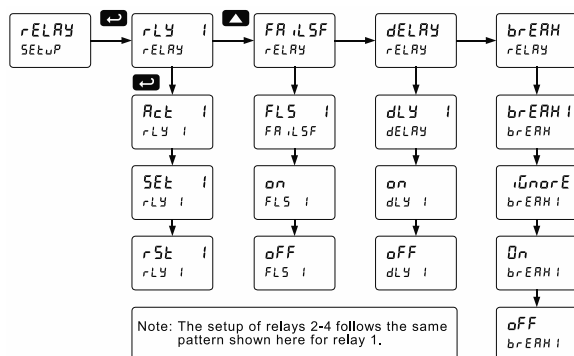

## Setting the Relay Action

Operation of the relays is programmed in the *Action* menu. The relays may be set up for any of the following modes of operation:

1. Automatic reset (non-latching)
2. Automatic + manual reset at any time (non-latching)
3. Latching (manual reset only, at any time)
4. Latching with Clear (manual reset only after alarm condition has cleared)
5. Relay alternation control (automatic reset only)
6. Sampling (the relay is activated for a user-specified time)
7. Off (relay disabled and Interlock feature enabled)

The following graphic shows relay 1 action setup; relay 2-4 are set up in a similar fashion.
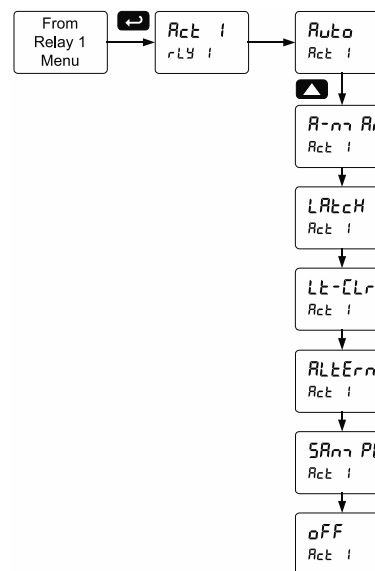

## Programming Set and Reset Points

High alarm indication: program set point above reset point.

Low alarm indication: program set point below reset point.

The deadband is determined by the difference between set and reset points. Minimum deadband is one display count. If the set and reset points are programmed with the same value, the relay will reset one count below the set point.

**Note:** Changes are not saved until the reset point has been accepted.

## Setting Fail-Safe Operation

In fail-safe mode of operation, the relay coil is energized when the process variable is within safe limits and the relay coil is de-energized when the alarm condition exists. The fail-safe operation is set independently for each relay. Select *on* to enable or select *oFF* to disable fail-safe operation.

## Programming Time Delay

The *On* and *Off* time delays may be programmed for each relay between 0 and 999.9 seconds. The relays will transfer only after the condition has been maintained for the corresponding time delay.

The *On* time delay is associated with the set point.

The *Off* time delay is associated with the reset point.

## Relay Action for Loss of Input (Input Break)

Each relay may be programmed to go to one of the following conditions when the meter detects the loss of the input signal:

1. Turn *On* (Go to alarm condition)
2. Turn *Off* (Go to non-alarm condition)
3. Ignore (Processed as an upscale condition)

# Relay and Alarm Operation Diagrams

The following graphs illustrate the operation of the relays, status LEDs, and ACK button.

## High Alarm Operation (Set > Reset)

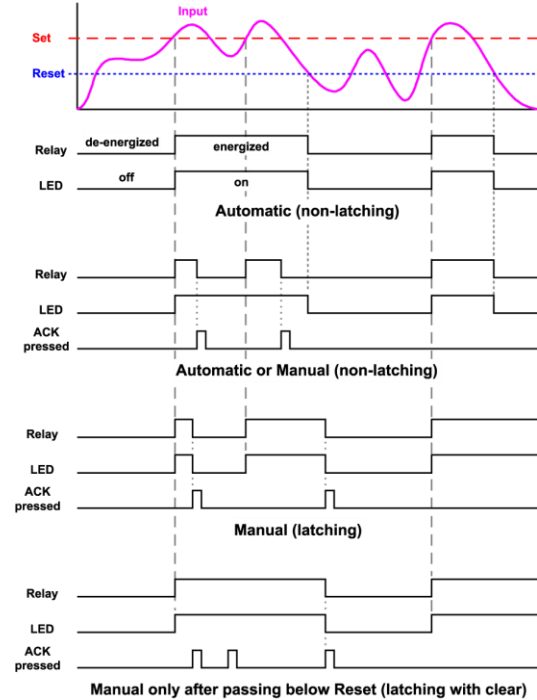

For Manual reset mode, ACK can be pressed anytime to turn "off" relay. To detect a new alarm condition, the signal must go below the set point, and then go above it.

## Low Alarm Operation (Set < Reset)

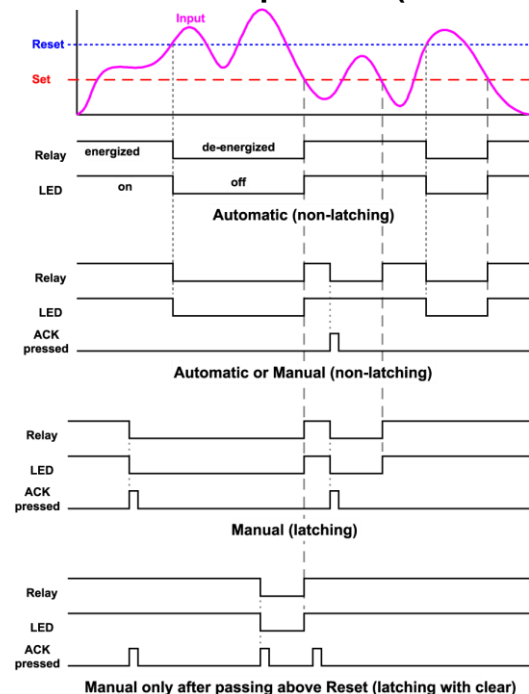

For Manual reset mode, ACK can be pressed anytime to turn "off" relay. For relay to turn back "on", signal must go above set point and then go below it.

## High Alarm with Fail-Safe Operation (Set > Reset)

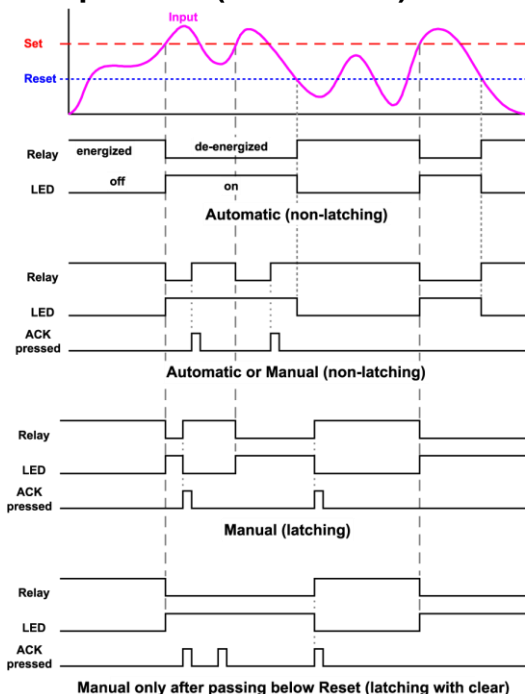

**Note:** Relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

## Low Alarm with Fail-Safe Operation (Set < Reset)

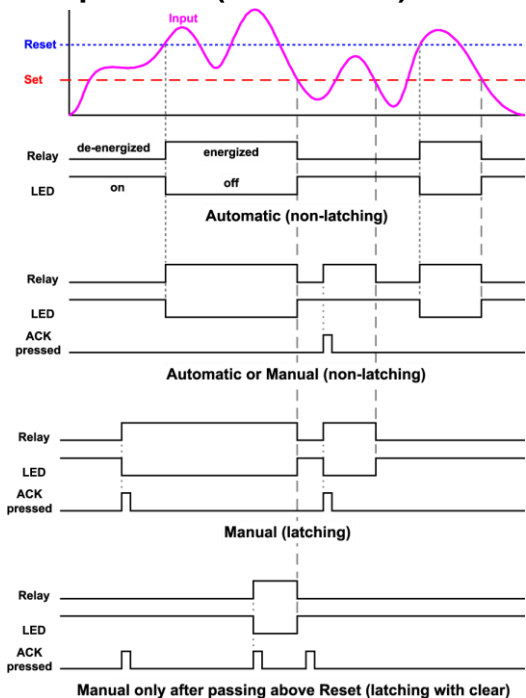

**Note:** Relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

## Relay Sampling Operation

When the signal crosses the set point, the relay trips and the sample time starts. After the sample time has elapsed, the relay resets. The cycle repeats every time the set point is crossed, going up for high alarms and going down for low alarms.

The sample time can be programmed between 0.1 and 5999.9 seconds.

## Signal Loss or Input Break Relay Operation

The following graph shows the input break relay operation for a high alarm relay.

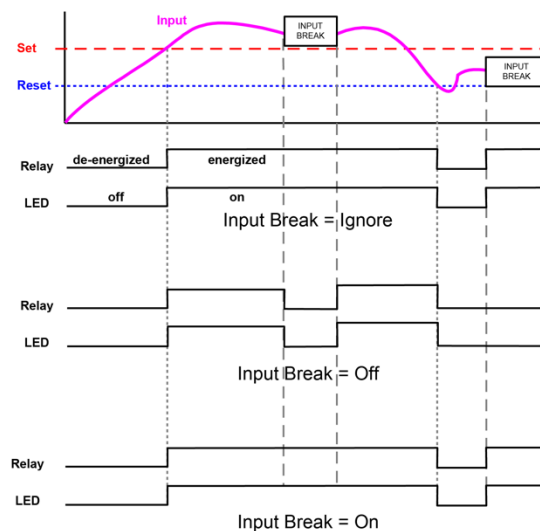

When the meter detects a break in the input, the relay will go to one of the following selected actions:

1. Turn *On* (Go to alarm condition)
2. Turn *Off* (Go to non-alarm condition)
3. Ignore (Processed as an upscale condition)

## Time Delay Operation

The following graphs show the operation of the time delay function.

**On Time Delay**

**Off Time Delay**

When the signal crosses the set point, the *On* time delay timer starts and the relay trips when the time delay has elapsed. If the signal drops below the set point (high alarm) before the time delay has elapsed, the *On* time delay timer resets and the relay does not change state. The same principle applies to the *Off* time delay.

**Note:** If "Automatic or Manual (Я-ก·Яก)" reset mode is selected, the LED follows the reset point and not the relay state when the relay is acknowledged.

# Relay Operation Details
## Overview

The four-relays option for the meter expands its usefulness beyond simple indication to provide users with alarm and control functions. Typical applications include high or low temperature alarms, control applications such as simple on/off temperature control. There are four basic ways the relays can be used:

1. High and Low Alarms with Latching or Non-Latching Relays
2. Simple On/Off Control with 100% Adjustable Deadband
3. Sampling (Based on Time)
4. Relay Alternation Control

## Relays Auto Initialization

When power is applied to the meter, the front panel LEDs and alarm relays will reflect the state of the input to the meter. The following table indicates how the alarm LEDs and relays will react on power-up based on the set and reset points:

| Alarm # | HI or LO Alarm | Set Point | Reset Point | Power-Up Reading | Relay & LED |
|---|---|---|---|---|---|
| 1 | HI | 1000 | 500 | 499 | Off |
| 2 | LO | 700 | 900 | 499 | On |
| 3 | LO | 250 | 400 | 499 | Off |
| 4 | HI | 450 | 200 | 499 | On |

## Fail-Safe Operation

The following table indicates how the relays behave based on the fail-safe selection for each relay:

| Fail-Safe Selection | Non-Alarm State | | Alarm State | | Power Failure |
|---|---|---|---|---|---|
| | **NO** | NC | **NO** | NC | |
| Off | Open | Closed | Closed | Open | Relays go to non-alarm state |
| On | Closed | Open | Open | Closed | Relays go to alarm state |

**Note:** NO = Normally Open, NC = Normally Closed. This refers to the condition of the relay contacts when the power to the meter is off.

## Front Panel LEDs

The alarm status LEDs on the front panel are available on all meters, even those without relays installed, and provide status indication for the following:

| LED | Status |
|-----|--------|
| 1 | Alarm 1 |
| 2 | Alarm 2 |
| 3 | Alarm 3 |
| 4 | Alarm 4 |

The meter is supplied with four alarm points that include front panel LEDs to indicate alarm conditions. This standard feature is particularly useful for alarm applications that require visual-only indication. The LEDs are controlled by the set and reset points programmed by the user. When the display reaches a set point for a high or low alarm, the corresponding alarm LED will turn on. When the display returns to the reset point the LED will go off. The front panel LEDs respond differently for latching and non-latching relays.

For non-latching relays, the LED is always off during normal condition and always on during alarm condition, regardless of the state of the relay (e.g. Relay acknowledged after alarm condition).

For latching relays, the alarm LEDs reflect the status of the relays, regardless of the alarm condition. The following tables illustrate how the alarm LEDs function in relation to the relays and the acknowledge button (Default: F3 key assigned to ACK).

## Latching and Non-Latching Relay Operation

The relays can be set up for latching (manual reset) or non-latching (automatic reset) operation.

| Relay terminology for following tables | |
|----------------------------------------|--------------------------|
| **Terminology** | **Relay Condition** |
| On | Alarm (Tripped) |
| Off | Normal (Reset) |
| Ack | Acknowledged |

The On and Off terminology does not refer to the status of the relay's coil, which depends on the fail-safe mode selected.

⚠ **WARNING**

- In latching relay mode, if Fail-Safe is off, latched relays will reset (unlatch) when power is cycled.

## Non-Latching Relay (𝐴𝑢𝑡𝑜)

In this application, the meter is set up for automatic reset (non-latching relay). Acknowledging the alarm while it is still present has no effect on either the LED or the relay. When the alarm finally goes away, the relay automatically resets, and the LED also goes off.

| Automatic reset only | | |
|----------------------|-----|-------|
| **Condition** | **LED** | **Relay** |
| Normal | Off | Off |
| Alarm | On | On |
| Ack (No effect) | On | On |
| Normal | Off | Off |

## Non-Latching Relay with Manual Reset (𝐴-𝑛𝑅𝑛)

In this application, the meter is set up for automatic and manual reset at any time (non-latching relay). The LED and the relay automatically reset when the meter returns to the normal condition.

In addition, the relay can be manually reset while the alarm condition still exists, but the LED will stay on until the meter returns to the normal condition.

| Automatic + manual reset at any time | | |
|--------------------------------------|-----|-------|
| **Condition** | **LED** | **Relay** |
| Normal | Off | Off |
| Alarm | On | On |
| Normal | Off | Off |
| Next Alarm | On | On |
| Ack | On | Off |
| Normal | Off | Off |

## Latching Relay (𝐿𝐴𝑡𝑐𝐻)

In this application, the meter is set up for manual reset at any time. Acknowledging the alarm even if the alarm condition is still present resets the relay and turns off the LED.

| Manual reset any time | | |
|-----------------------|-----|-------|
| **Condition** | **LED** | **Relay** |
| Normal | Off | Off |
| Alarm | On | On |
| Ack | Off | Off |

## Latching Relay with Clear (Lt-Clr)

In this application, the meter is set up for manual reset only after the signal passes the reset point (alarm condition has cleared). Acknowledging the alarm while it is still present has no effect on either the LED or the relay. When the alarm is acknowledged after it returns to the normal state, the LED and the relay go off. Notice that the LED remains on, even after the meter returns to the normal condition. This is because, for latching relays, the alarm LED reflects the status of the relay, regardless of the alarm condition.

| Manual reset only after alarm condition has cleared | | |
|---|---|---|
| **Condition** | **LED** | **Relay** |
| Normal | Off | Off |
| Alarm | On | On |
| Ack (No effect) | On | On |
| Normal | On | On |
| Ack | Off | Off |

## Acknowledging Relays

There are three ways to acknowledge relays programmed for manual reset:

1.  Via the programmable front panel function keys F1-F3 (Example: F3 assigned to ACK).

2.  Remotely via a normally open pushbutton wired to the F4 terminal.

3.  Remotely via a normally open push button wired to one of the digital inputs and the +5 V terminal on the digital I/O connections.

When the ACK button or the assigned digital input is closed, all relays programmed for manual reset are acknowledged.

## Setting Up the Interlock Relay (Force On) Feature

Relays 1-4 can be set up as interlock relays. To set up the relays for the interlock feature:

1. Access the *Setup – Relay – Action* menu and set the action to off.

2. In the Advanced features – *User* menu program any of the digital inputs to *Force On* any of the internal relays (1-4).

3. Connect a switch or dry contact between the +5 V terminal and the corresponding digital input (dI-1 to dI-4) terminal.

## Interlock Relay Operation Example

Relays 1 & 2 are configured to energize (their front panel LEDs are steady on) when SW1 & SW2 switches (above) are closed. If the contacts to these digital inputs are opened, the corresponding front panel LEDs flash indicating this condition. The processes being controlled by the interlock relay will stop, and will re-start only after the interlock relay is re-activated by the digital inputs (switches).

**Note:** If multiple digital inputs are assigned to the same relay, then the corresponding logic is (AND) – i.e. both switches must be closed to activate the relay.

⚠ IMPORTANT

- If the digital inputs are assigned to the *Interlock Function*, then they cannot be used to program the meter remotely.

## Scaling the 4-20 mA Analog Output (Rout)

The 4-20 mA analog output can be scaled to provide a 4-20 mA signal for any display range selected.

No equipment is needed to scale the analog output; simply program the display values to the corresponding mA output signal.

The *Analog Output* menu is used to program the 4-20 mA output based on display values.

**Note:** During the analog output scaling, the display value is always indicated with a decimal point regardless of the decimal point selection for the temperature display.

For instructions on how to program numeric values see *Setting Numeric Values*, page *33*.

## Reset Menu (rESEt)

The *Reset* menu is used to reset the maximum or minimum reading (peak or valley) reached by the process; both may be reset at the same time by selecting "reset high & low" (rSt HL).

## Manual Control Menu (ContrL)

The *Manual Control* menu is used to control the 4-20 mA analog output and the relays manually, ignoring the input. Each relay and analog output can be programmed independently for manual control. Selecting automatic control sets all relays and analog output for automatic operation.

Once Manual mode is initiated on any relay or analog output, an LED labeled "M" is turned on. Every few seconds, all LEDs representing outputs that are in Manual mode, as well as the "M" LED flash. This process will continue as long as any output is in manual mode.
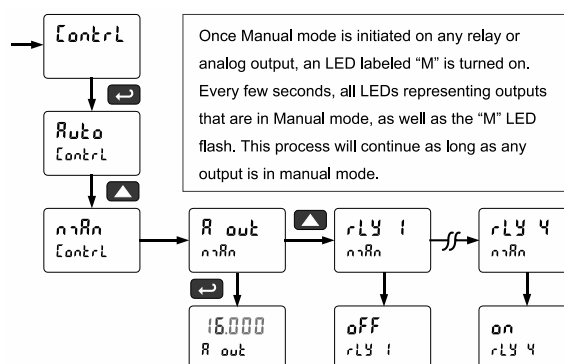

# Setting Up the Password (PASS)

The *Password* menu is used for programming three levels of security to prevent unauthorized changes to the programmed parameter settings.

Pass 1: Allows use of function keys and digital inputs
Pass 2: Allows use of function keys, digital inputs and editing set/reset points
Pass 3: Restricts all programming, function keys, and digital inputs.

## Protecting or Locking the Meter

Enter the *Password* menu and program a six-digit password.

For instructions on how to program numeric values see *Setting Numeric Values*, page *33*.

## Making Changes to a Password Protected Meter

If the meter is password protected, the meter will display the message Locd (*Locked*) when the Menu button is pressed. Press the Enter button while the message is being displayed and enter the correct password to gain access to the menu.

**Note:** After exiting the programming mode, the meter returns to its password protected condition

## Disabling Password Protection

To disable the password protection, access the *Password* menu and enter the correct password twice, as shown below. The meter is now unprotected until a new password is entered.

If the correct six-digit password is entered, the meter displays the message unLoc (*unlocked*) and the protection is disabled until a new password is programmed.

If the password entered is incorrect, the meter displays the message Locd (Locked) for about two seconds, and then it returns to Run Mode. To try again, press Enter while the *Locked* message is displayed.

### Did you forget the password?

The password may be disabled by entering a master password once. If you are authorized to make changes, enter the master password 508655 to unlock the meter.

## Advanced Features Menu

To simplify the setup process, functions not needed for most applications are located in the *Advanced Features* menu.

Press and hold the Menu button for three seconds to access the advanced features of the meter.

### Advanced Features Menu & Display Messages

The following table shows the functions and messages of the *Advanced Features* menu in the order they appear in the menu.

| Display | Parameter | Action/Setting |
|---|---|---|
| RdJuSt | Adjust | Set adjust value to offset temperature reading |
| t cRL | T Cal | Enter temperature calibration menu |
| t Lo | T Low | Apply the low temperature input (e.g. 32°F) |
| t Hi | T High | Apply the high temperature input (e.g. 1000°F) |
| rtdtot | RTD Total | Set the number of RTDs connected in parallel to obtain average temperature |
| FiLtEr | Filter | Set noise filter value |
| bYPRSS | Bypass | Set filter bypass value |
| round | Round | Set the rounding value for display variables |
| SEriRL | Serial | Set serial communication parameters |
| SLRU id | Slave ID | Set slave ID or meter address |
| bRud | Baud rate | Select baud rate |
| tr dLY | Transmit delay | Set transmit delay for serial communication |
| PRritY | Parity | Select parity Even, Odd, or None with 1 or 2 stop bits |
| t-bYt | Time byte | Set byte-to-byte timeout |
| SELEct | Select | Enter the Select menu |

| Display | Parameter | Action/Setting |
|---|---|---|
| RoutPr | Analog output programming | Program analog output parameters |
| SourcE | Source | Select source for the 4-20 mA output |
| O-rRnG | Overrange | Program mA output for display overrange |
| u-rRnG | Underrange | Program mA output for display underrange |
| brERK | Input break | Set analog output value if input break is detected |
| nRX | Maximum | Program maximum mA output allowed |
| niin | Minimum | Program minimum mA output allowed |
| CRL ib | Calibrate | Calibrate 4-20 mA output (internal reference source used for scaling the output) |
| 4 nR | 4 mA output | Enter mA output value read by milliamp meter with at least 0.001 mA resolution |
| 20 nR | 20 mA output | Enter mA output value read by milliamp meter with at least 0.001 mA resolution |
| uSEr | User I/O | Assign function keys and digital I/O |
| F1 | F1 function key | Assign F1 function key |
| F2 | F2 function key | Assign F2 function key |
| F3 | F3 function key | Assign F3 function key |
| F4 | F4 function | Assign F4 function (digital input) |
| di 1 | Digital input 1 | Assign digital input 1 – 4 |
| dO 1 | Digital output 1 | Assign digital output 1 – 4 |
| ICRL | Internal temp calibration | Enter internal temperature calibration (used for factory calibration only) |
| nrEF | Measured temp reference | Enter the measured reference temperature in degrees Celsius (e.g. 25.0) |
| OnU | 0 mV | Apply 0.000 mV input Internal Calibration |
| 100nU | 100 mV | Apply 100.000 mV input |
| diRG | Diagnostics | Display parameter settings |
| LEd t | LED test | Test all LEDs (press menu to exit test) |
| InFo | Information | Display software number and version |
| ErRSE | Erase | Erase MeterView Pro software stored in meter's memory |

## Offset Adjust (Adjust)

This parameter allows the user to select an offset adjustment to the temperature being displayed. Offset adjustment values can be either positive or negative and can be any number within ±50.0°F (+27.8°C). The offset adjustment value is programmed through the *Adjust* menu.

The offset adjustment feature can be useful to compensate for errors due to thermocouple junctions or excessive lead wire resistance in RTDs.

**Note:** The offset adjustment value is reset to zero when the type of temperature sensor is changed (i.e. TC type or RTD curve). Celsius/Fahrenheit conversion is automatic.

## Recalibration of the Meter (t CAL)

The *Calibration* (t CAL) menu is used to **recalibrate** the thermocouple and RTD inputs.

> - There is **no need to recalibrate** the meter when first received from the factory. Simply select the input type, ⁰F or ⁰C, and decimal point.
> - The meter is **factory calibrated** prior to shipment to read temperature in degrees Fahrenheit with calibration equipment that is certified to NIST standards.
> - Check calibration of the meter at least every 12 months.

*Allow at least 30 minutes warm-up time before performing recalibration procedure to ensure specified accuracy.*

## Recommended Calibration Points

To recalibrate the meter, it is recommended to use the Fahrenheit scale; this will give a greater degree of accuracy to the calibration. The scale can be changed to the Celsius scale after calibration is completed. The meter will display temperature accurately in any scale. The following table shows the recommended low and high calibration points for all types.

| Type of input | Input 1 (Low) | Input 2 (High) | Check (Middle) |
|---|---|---|---|
| Type J | 32°F | 1184°F | 600°F |
| Type K | 32°F | 1895°F | 960°F |
| Type T | 32°F | 698°F | 360°F |
| Type E | 32°F | 1652°F | 800°F |
| Type R | 32°F | 3110°F | 1500°F |
| Type S | 32°F | 3110°F | 1500°F |
| Type B | 32°F | 3110°F | 1500°F |
| Type N | 32°F | 1472°F | 700°F |
| Type C | 500°F | 3650°F | 1800°F |
| 10 Ω Cu RTD | 32°F 9.035Ω | 450°F 18.032Ω | 200°F 12.639Ω |
| 100 Ω Pt RTD (0.00385) | 32°F 100Ω | 1148°F 320.12Ω | 590°F 215.61Ω |
| 100 Ω Pt RTD (0.00392) | 32°F 100Ω | 1148°F 324.49Ω | 590°F 217.89Ω |
| 120 Ω Ni RTD | 32°F 120Ω | 410°F 315.31Ω | 221°F 205.22Ω |
| 1000 Ω Pt RTD (0.00385) | 32°F 1000Ω | 900°F 2750.4Ω | 450°F 1876.5Ω |
| 1000 Ω Pt RTD (0.00392) | 32°F 1000Ω | 900°F 2785.1Ω | 450°F 1893.7Ω |

## Recalibration Procedure

1. Connect signal to the meter using the appropriate wire (e.g. type J thermocouple wire to recalibrate type J input). See *Signal Connections* on page *26.*
2. Set up the meter to accept the selected input (e.g. type J T/C). See *Setting Up the Meter* (SEtuP) on page *34.*
3. Set up the meter to display temperature in degrees Fahrenheit.
4. Apply signal corresponding to input 1 (32°F) and program the display to read 32.0.
5. Apply signal corresponding to input 2 (1184°F for type J) and program the display accordingly.
6. After the meter accepts input 2, the display returns to reading mode. This completes the recalibration procedure for the selected input.

## Noise Filter (FiLtEr)

The noise filter is available for unusually noisy signals that cause an unstable process variable display. The noise filter averages the input signal over a certain period. The filter level determines the length of time over which the signal is averaged. The filter level can be set between 2 and 199. The higher the filter level, the longer the averaging time and so the longer it takes the display to settle to its final value. Setting the filter level to zero disables the filter function.

## Noise Filter Bypass (bYPASS)

The noise filter bypass changes the behavior of the meter so that small variations in the signal are filtered out but large abrupt changes in the input signal are displayed immediately. The bypass value determines the minimum amount of signal change to be displayed immediately. All signal changes smaller than the bypass value are filtered or averaged by the meter. The noise filter bypass may be set between 0.1 and 99.9% of full scale.

## Rounding Feature (round)

The rounding feature is used to give the user a steadier display with fluctuating signals. Rounding is used in addition to the filter function.

Rounding causes the display to round to the nearest value according to the rounding selected. Valid settings for this meter are 1, 2, 5, and 10 (only).

## Modbus RTU Serial Communications (SEr iAL)

The meter is equipped with serial communications capability as a standard feature using the Modbus RTU Serial Communication Protocol.

The meter may be connected to a PC for initial configuration via the onboard USB connection. For ongoing digital communications with a computer or other data terminal equipment, use the RS-485 connection with the appropriate serial converter; see *Ordering Information* on page *7* for details.

> ⚠️ **CAUTION**

- **DO NOT** connect any equipment to the RJ45 M-LINK connector. Otherwise damage will occur to the equipment and the meter.
- **DO NOT** disconnect the RJ45 connector located to the left of the power terminal block. Doing so will disable the on-board digital I/O, and the RS-485 serial communications.

**Notes:**
1. More detailed instructions are provided with each optional serial communications adapter.
2. Refer to the ProtEX-MAX Modbus Register Tables located at www.predig.com for details.

When using more than one meter in a multi-drop mode, each meter must be have its own unique Slave ID or meter address. The ID or address may be programmed between 1 and 247. The transmit delay may be set between 0 and 199 ms. The parity can be set to even, odd, or none with 1 or 2 stop bits.

## Select Menu (SELEct)

The *Select* menu is used to program the analog output parameters. There are no other selections for this model.

47
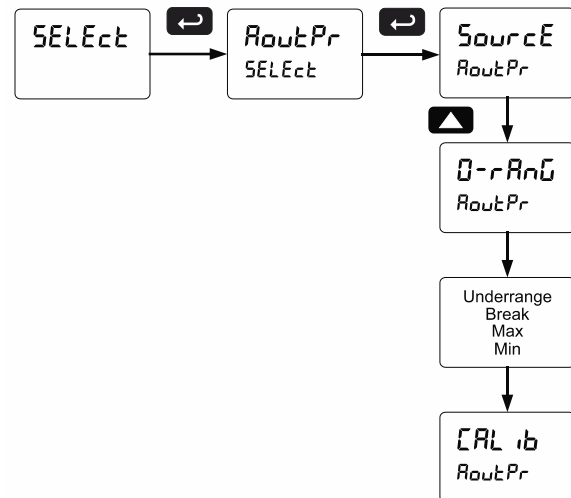

## Analog Output Programming (RoutPr)

The *Analog Output Programming* menu is used to program the behavior of the 4-20 mA output. The following parameters and functions are programmed in this menu:

1.  Source: Source for generating the 4-20 mA output (e.g. PV - temperature)
2.  Overrange: Analog output value with display in overrange condition
3.  Underrange: Analog output value with display in underrange condition
4.  Break: Analog output value when input break is detected
5.  Max: Maximum analog output value allowed regardless of input
6.  Min: Minimum analog output value allowed regardless of input
7.  Calibrate: Calibrate the internal 4-20 mA source reference used to scale the 4-20 mA output

### Analog Output Source

The source for generating the 4-20 mA output may be assigned to the process variable, maximum or minimum value reached by the process, one of the set points, or the Modbus PV input.

## Analog Output Calibration

To perform the analog output calibration, it is recommended to use a milliamp meter with a resolution of at least 0.1 µA to measure the output current. The values saved internally during this procedure are used for scaling the 4-20 mA output in the *Setup* menu.

### Analog Output Calibration Procedure

1.  Wire the PD8-7000 4-20 mA output to a current loop that includes a power supply (internal or external 12 to 24 VDC), and the mA input on the digital meter. See *Figure 20. 4-20 mA Output Connections* on page *29* for details.
2.  Turn on all devices. Allow for a 15 to 30 minute warm-up.
3.  Go to the Advanced Features menu, navigate to Select (SELEct) and choose Analog Output Programming (RoutPr) → Calibration (CRLib) menu and press **Enter**.
4.  The display will show Ч in8. The PD8-7000 mA output should now be close to 4 mA. Press Enter and the display will show 04.000. Enter the actual value read by the digital mA meter and press **Enter**.
5.  The display will show 20 in8. The PD8-7000 mA output should now be close to 20 mA. Press **Enter** and the display will show 20.000. Enter the actual value read by the digital mA meter and press **Enter**.
6.  The meter will now calculate the calibration factors and store them.
7.  Press **Menu** to exit and return to Run mode.

## Programmable Function Keys
## User Menu (uSEr)

The *User* menu allows the user to assign the front programming buttons function keys F1, F2, and F3, the digital input F4 (located on the input signal connector), and four digital inputs (located on the digital I/O connector) to access most of the menus or to activate certain functions immediately (e.g. reset max & min, hold relay states, etc.). This allows the meter to be greatly customized for use in specialized applications.

The four digital outputs can be assigned to a number of actions and functions executed by the meter (i.e. alarms, relay acknowledgement, reset max, min, or max & min). The digital outputs can be used to trigger external alarms or lights to indicate these specific events.

## Function Keys & Digital I/O
## Available Settings

Refer to the following table for descriptions of each available function key or digital I/O setting.

| Display | Description |
|---------|-------------|
| rSt Hi | Reset the stored maximum display value |
| rSt Lo | Reset the stored minimum display value |
| rSt HL | Reset the stored maximum & minimum display values |
| rELAY | Directly access the relay menu |
| SEt 1* | Directly access the set point menu for relay 1 (*through 4) |
| rLY d | Disable all relays until a button assigned to *enable relays* (rLY E) is pressed |
| rLY E | Enable all relays to function as they have been programmed |
| 0 HoLd | Hold current relay states as they are until a button assigned to *enable relays* (rLY E) is pressed |
| d HoLd | Hold the current display value momentarily while the function key or digital input is active. The process value will continue to be calculated in the background. |
| Ln1 Hi | Display maximum display value on line 1 |
| Ln1 Lo | Display minimum display value on line 1 |
| Ln1 HL | Display maximum & minimum display values on line 1 |
| Ln2 Hi | Display maximum display value on line 2 |
| Ln2 Lo | Display minimum display value on line 2 |
| Ln2 HL | Display maximum & minimum display values on line 2 |
| F On 1* | Force relay 1 (*through 4) into the on state. This function is used in conjunction with a digital input to achieve interlock functionality. See page 41 for details about interlock relays. |
| ContrL | Directly access the control menu |
| diSAbL | Disable the selected function key or digital I/O |
| AcH | Acknowledge all active relays that are in a manual operation mode such as auto-manual or latching |
| rESEt | Directly access the reset menu |
| mEnu | Mimic the menu button functionality (digital inputs only) |
| riGHt | Mimic the right arrow/F1 button functionality (digital inputs only) |
| uP | Mimic the up arrow/F2 button functionality (digital inputs only) |
| EntEr | Mimic the enter/F3 button functionality (digital inputs only) |
| ALm 1* | Provide indication when alarm 1 (*through 4) has been triggered (digital outputs only) |

## Internal Temperature Calibration ( ICAL )

The meter is **factory calibrated** prior to shipment to read temperature in degrees Fahrenheit with calibration equipment that is certified to NIST standards.

The Internal Calibration ( ICAL ) is a function used at the factory to calibrate all the thermocouple and RTD ranges. This procedure should only be used by qualified personnel.

To recalibrate the meter for a specific input and range, refer to *Recalibration of the Meter* ( t CAL ) on page *46*.

**Notes:**
1. If meter is in operation and it is intended to accept only one input type (e.g. 100 Pt), recalibration of other inputs is not necessary.
2. Allow the meter to warm up for at least 30 minutes before performing the calibration procedure.
3. Use the *Recalibration of the Meter (t CAL)* procedure on page *46*.

The *Internal calibration* menu is part of the *Advanced Features* menu and is described in the following pages. This procedure should only be used by qualified personnel.

**Note:** Most users should not require the use of the Internal Calibration procedure. The T CAL procedure should be used instead of the ICAL procedure.

### Thermocouple Input Internal Calibration ( ICAL )

1. Set the Type selector switch in the TC position and using copper wire connect a precision mV calibrator to the input.
2. In the *Setup* menu select the input: TC – Type J.
3. Press and hold the Menu button for three seconds to access the advanced features of the meter.
4. Press the Up arrow button to scroll to the *Internal calibration* menu ( ICAL ) and press Enter.
5. The meter displays either current calibration ( nr rEF ). Press Enter to start the calibration process.
6. Measure the room temperature in degrees Celsius using a reliable reference, enter the room temperature (e.g. 25.0), and press Enter.
7. The meter displays 0mrV, apply an input equal to 0.000 mV and press Enter. The display flashes while accepting the 0 mV input; press Enter again when the display stops flashing.
8. The meter displays 100mrV, apply an input equal to 100.000 mV and press Enter. The display flashes while accepting the 100 mV input; press Enter again when the display stops flashing.
9. Apply 0 mV, the meter should read room temperature.
10. This completes the calibration of all the thermocouple ranges.

### RTD Input Internal Calibration ( ICAL )

1. Set the Type selector switch in the RTD position and the Range switch in the 10 position. Using 3 wires connect a precision calibrator resistance output to the meter.
2. In the *Setup* menu select the input: RTD – 100 Pt – A385.
3. Access the *Advanced Features* menu and scroll to the *ICAL* menu and press Enter.
4. The meter displays the message ( 10 Lo ). Apply 9.035 ohm and press Enter. The display flashes for a moment while the meter is accepting the low input signal for the 10-ohm RTD. After the display stops flashing, press Enter again.
5. The meter displays the message ( 10 Hi ). Apply 18.032 ohm and press Enter. The display flashes for a moment while the meter is accepting the high input signal for the 10-ohm RTD. After the display stops flashing, press Enter again.
6. The meter displays the message ( 100 Lo ). **Do NOT press Enter**.
7. Move the Range selector switch to the 100 position. Apply 100 ohm and press Enter. The display flashes for a moment while the meter is accepting the low input signal for the 100-ohm RTD.
8. The meter displays the message ( 100 Hi ). Apply 320.12 ohm and press Enter. The display flashes for a moment while the meter is accepting the high input signal for the 100-ohm RTD.
9. At the end of the calibration process the meter should read 1148.0F with the 320.12-ohm input applied.
10. This completes the calibration of all the RTD ranges.
# Meter Operation

When installed, the primary way to operate the meter is with the CapTouch through-glass buttons that allow the user to perform various operations without removing the cover and exposing the electronics to the hazardous environment. The user can also operate the meter by connecting a suitable control station or switch to one of the digital inputs that can be used to perform various operations on the meter based on the Programmable Function Keys. Finally, certain operations can be performed on the meter with MeterView Pro software or through Modbus commands.

The two default operations that can be performed with the meter's CapTouch buttons are:

1. Display the maximum and minimum readings
2. Acknowledge the relays

In addition, the user can program the CapTouch Buttons to perform a variety of useful operations by reassigning them to other functions per *Function Keys & Digital I/O Available Settings* on page *49*.

# Button Operation

The following table shows the default operations for the F1, F2, and F3 CapTouch Buttons, Displaying and resetting the maximum and minimum values and resetting the relays:

| Button Symbol | Description |
|---|---|
| MENU / MENU | Press to enter or exit Programming Mode, view settings, or exit max/min readings |
| F1 / F1 | Press to reset max/min readings or other parameter/function assigned through the *User* menu |
| F2 / F2 | Press to display max/min readings or other parameter/function assigned through the *User* menu |
| F3 / F3 | Press to acknowledge relays or other parameters/function assigned through the *User* menu |

# CapTouch Buttons

The ProtEX-MAX is equipped with four capacitive sensors that operate as through-glass buttons so that it can be programmed and operated without removing the cover (and exposing the electronics) in a hazardous area.

These buttons can be disabled for security by selecting DISABLE on the switch labeled NO-CONTACT BUTTONS located on the connector board.

To actuate a button, press one finger to the window directly over the marked button area. When the cover is removed or replaced, the CapTouch buttons can be used after the meter completes a self-calibrating routine. The sensors are disabled when more than one button is pressed, and they will automatically re-enable after a few seconds. When the cover is removed, the four mechanical buttons located on the right of the faceplate are used.

The CapTouch Buttons are configured by default to duplicate the function of the front panel mechanical pushbuttons associated with the integrated meter. The symbols by each CapTouch button correspond to a mechanical button as shown in the table to the left.

## CapTouch Button Tips:

- Keep the glass window clean.
- Tighten the cover securely.
- Use a password to prevent tampering.

## Function Keys Operation

During operation, the programmable function keys operate according to the way they have been programmed in the *Advanced Features – User* menu. See See *Programmable Function Keys User Menu* (u5Er) on page *49* for details.

See the table under *Button Operation* on page *51*, which shows the factory default settings for F1, F2, and F3.

## Digital Inputs Operation

Five (5) digital inputs, F4, DI-1 to DI-4, come standard on the meter. These digital inputs are programmed identically to function keys F1, F2, and F3. The inputs are triggered with a contact closure to +5 V in the case of digital inputs 1-4 or with an active high signal, see *Digital I/O Connections* on page *28* for details. The F4 is triggered with a contact closure to COM or with an active low signal. During operation, digital inputs operate according to the way they are programmed in the Advanced Features – User menu. See *Programmable Function Keys User Menu* (u5Er) on page 49 for details.

## Maximum/Minimum Readings

The max & min readings (peak & valley) reached by the process can be displayed either continuously or momentarily:

1.  Display momentarily by assigning to the F1-F3 function keys or to the digital inputs in the *User* menu.
2.  Display continuously by assigning either display to max/min through the *Display* menu.

Any of the F1-F3 function keys (buttons) and the digital inputs can be programmed to reset the max & min readings. The meters are set at the factory to display the max reading by pressing the Up arrow/F2 button and to use the Right arrow/F1 button to access the *Reset* menu.

**To display max reading using function key with factory defaults:**

1.  Press Up arrow/F2 button to display maximum reading since the last reset/power-up.
2.  To reset max/min press Right arrow/F1 button to access the Reset menu. The max & min displays are reset to actual values.
3.  Press Menu to exit max/min display reading.

**To display max/min readings continuously:**

Assign either display to Max (d H¹), Min (d Lo), or toggle between Max and Min (d HL) every 10 seconds.
# Troubleshooting

The rugged design and the user-friendly interface of the meter should make it unusual for the installer or operator to refer to this section of the manual. However, due to the many features and functions of the meter, it's possible that the setup of the meter does not agree with what an operator expects to see.

If the meter is not working as expected, refer to the *Diagnostics* menu and recommendations below.

## Diagnostics Menu (d ιAG)

The *Diagnostics* menu is located in the *Advanced Features* menu, to access *Diagnostics* menu see *Advanced Features Menu* on page *45*.

This menu allows the user to test the functionality of all the meter LEDs, check the meter's software and version information, and erase the MeterView Pro software installation files from the meter. Press the Enter button to view the settings and the Menu button to exit at any time.

For a description of the diagnostic messages, *see Advanced Features Menu & Display Messages* on page *45*.

### Testing the Display LEDs

To test all LEDs on the display:

1. Go to the *Diagnostics* menu (d ιAG) and press Enter button.
2. Press Up arrow button and scroll to *LED Test* menu (LEd t)
3. Press the Enter button to activate the LED Test. The meter will cycle through all digits, decimal points, and relay indicators to enable the operator to check that all LEDs are functioning properly.
4. Press the Enter button again to access the *Information* menu (ιnFo) or press the Menu button to return to Run Mode.

### Determining Software Version
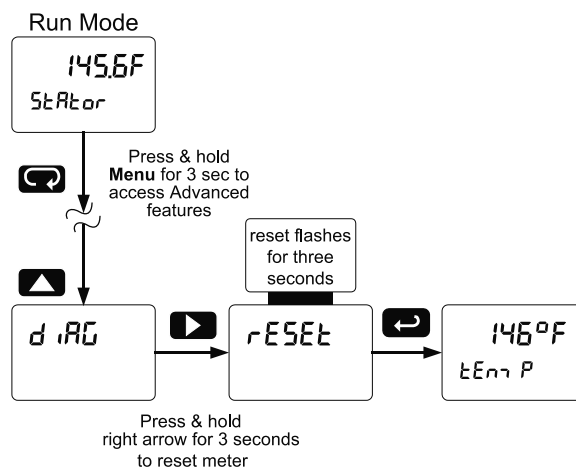

To determine the software version of a meter:

1. Go to the *Diagnostics* menu (d ιAG) and press Enter button.
2. Press Up arrow button and scroll to Information menu (ιnFo).
3. Press Enter to access the software number (SFt) and version (UEr) information. Write down the information as it is displayed. Continue pressing Enter until all the information is displayed.
4. The meter returns to Run Mode after displaying all the settings.

# Reset Meter to Factory Defaults

When the parameters have been changed in a way that is difficult to determine what's happening, it might be better to start the setup process from the factory defaults.

**Instructions to load factory defaults:**

1. Enter the *Advanced Features* menu. See *Advanced Features Menu*, page *45*.
2. Press Up arrow to go to *Diagnostics* (d ιAG) menu.
3. Press and hold Right arrow for three seconds, press Enter when display flashes rESEt.

   **Note:** If Enter is not pressed within three seconds, the display returns to the *Diagnostics* menu.
4. The meter goes through an initialization sequence (similar as on power-up) and loads the factory default settings.

Run Mode

145.6F

## Factory Defaults & User Settings

The following table shows the factory setting for most of the programmable parameters on the meter.

| Parameter | Display | Default Setting |
|---|---|---|
| Input type | InPut | Type J TC |
| Temp scale | F or C | °F |
| Adjust | AdJuSt | 0.0 |
| RTD total | rtdtot | 1 |
| Filter | FiLtEr | 70 |
| Bypass | bYPASS | 0.2 |
| Round | round | 1 |
| Decimal point | ddddoF | No decimal |
| Display line 1 | LinE 1 | PV: Temperature |
| Display line 2 | LinE 2 | Eng units: Temp |
| Display intensity | d-intY | 6 |
| Relay 1 action | Act 1 | Automatic |
| Relay 1 set point | SEt 1 | 100 |
| Relay 1 reset point | rSt 1 | 50 |
| Relay 2 action | Act 2 | Automatic |
| Relay 2 set point | SEt 2 | 200 |
| Relay 2 reset point | rSt 2 | 150 |
| Relay 3 action | Act 3 | Automatic |
| Relay 3 set point | SEt 3 | 300 |
| Relay 3 reset point | rSt 3 | 250 |
| Relay 4 action | Act 4 | Automatic |
| Relay 4 set point | SEt 4 | 400 |
| Relay 4 reset point | rSt 4 | 350 |
| Fail-safe relay 1 | FLS 1 | Off |
| Fail-safe relay 2 | FLS 2 | Off |
| Fail-safe relay 3 | FLS 3 | Off |
| Fail-safe relay 4 | FLS 4 | Off |
| On delay relay 1 | On 1 | 0.0 sec |
| Off delay relay 1 | OFF 1 | 0.0 sec |
| On delay relay 2 | On 2 | 0.0 sec |
| Off delay relay 2 | OFF 2 | 0.0 sec |
| On delay relay 3 | On 3 | 0.0 sec |
| Off delay relay 3 | OFF 3 | 0.0 sec |
| On delay relay 4 | On 4 | 0.0 sec |

| Parameter | Display | Default Setting |
|---|---|---|
| Off delay relay 4 | OFF 4 | 0.0 sec |
| Input break relay 1 | iGnorE | Ignore |
| Input break relay 2 | iGnorE | Ignore |
| Input break relay 3 | iGnorE | Ignore |
| Input break relay 4 | iGnorE | Ignore |
| Display 1 analog out | diS 1 | 0.0 |
| Output 1 value | Out 1 | 4.000 mA |
| Display 2 analog out | diS 2 | 2000.0 |
| Output 2 value | Out 2 | 20.000 mA |
| Source analog output | SourcE | Process Variable |
| Overrange output | O-rAnG | 21.000 mA |
| Underrange output | u-rAnG | 3.000 mA |
| Input break output | brEAK | 1.000 mA |
| Maximum output | nAX | 23.000 mA |
| Minimum output | nin | 1.000 mA |
| Slave ID | SLAu id | 247 |
| Baud rate | bAud | 9600 |
| Transmit delay | tr dLY | 10 ms |
| Parity | PArity | Even |
| Byte-to-byte timeout | t-bYt | 010 (0.1 sec) |
| F1 function key | F1 | Reset max & min |
| F2 function key | F2 | Line 1: Max (Hi) |
| F3 function key | F3 | Acknowledge relays |
| F4 function | F4 | Acknowledge relays |
| Digital input 1 | di 1 | Menu |
| Digital input 2 | di 2 | Right arrow |
| Digital input 3 | di 3 | Up arrow |
| Digital input 4 | di 4 | Enter |
| Digital output 1 | dO 1 | Alarm 1 |
| Digital output 2 | dO 2 | Alarm 2 |
| Digital output 3 | dO 3 | Alarm 3 |
| Digital output 4 | dO 4 | Alarm 4 |
| Password 1 | PASS 1 | 000000 (unlocked) |
| Password 2 | PASS 2 | 000000 (unlocked) |
| Password 3 | PASS 3 | 000000 (unlocked) |

## Troubleshooting Tips

This meter is a highly sophisticated instrument with an extensive list of features and capabilities. If the programming buttons are used to program the meter, it may be a difficult task to keep everything straight. That is why we strongly recommend the use of the free MeterView Pro software for all programming activities. A USB cable is provided with the meter for programming with MeterView Pro software.

If you have programmed the meter with the programming buttons and it is not working as intended, try re-programming the meter using MeterView Pro software.

| Symptom | Check/Action |
|---|---|
| No display at all | Check power at power connector |
| Not able to change setup or programming, `Locd` is displayed | Meter is password-protected, enter correct six-digit password to unlock or Master Password of 508655. |
| Meter displays error message during calibration (`Error`) | Check:<br>1. Signal connections<br>2. Type and range selector switches<br>3. Input selected in *Setup* menu |
| Meter displays<br>1. `99999`<br>2. `-9999` | Check:<br>1. Input selected in *Setup* menu<br>2. Corresponding signal at Signal connector |
| Display is unstable | Check:<br>1. Input signal stability and value<br>2. Filter and bypass values (increase) |
| Display response is too slow | Check filter and bypass values |
| Display reading is not accurate | Check:<br>1. TC wire type<br>2. Input selection in *Setup* menu |
| Display does not respond to input changes, reading a fixed number | Check the display assignment, it might be displaying max, min, or set point. |
| Display alternates between<br>1. `Hi` and a number<br>2. `Lo` and a number | Press Menu to exit max/min display readings. |
| Relay operation is reversed | Check:<br>1. Fail-safe in *Setup* menu<br>2. Wiring of relay contacts |
| Relay and status LED do not respond to signal | Check:<br>1. Relay action in *Setup* menu<br>2. Set and reset points |
| Flashing relay status LEDs | Relays in manual control mode or relay interlock switches opened. |
| Meter not communicating with application programs | Check:<br>1. M-Link Connector installed between PROVU electronics and ProtEX-MAX connector board. See *Figure 4*: Integrated PROVU Required Connections on page *23*<br>2. Serial settings<br>3. Meter address and baud rate |
| If the display locks up or the meter does not respond at all | Cycle the power to reboot the microprocessor. |
| CapTouch buttons do not respond | 1. Check if slide switch on connector board is in DISABLE position, switch to ENABLE.<br>2. Be sure to hold the initial CapTouch button for 5 seconds to wake it up. |

## Troubleshooting Tips

| Symptom | Check/Action |
|---|---|
| Serial Communications P (Power) LED Indicator is off | Check:<br>1.   Modular cable connection<br>2.   Power to the device |
| If only the TX (or DATA IN) data status LED is flashing when serial communications attempted | Check:<br>1.   Serial cable<br>2.   Instrument address & baud rate<br>4.   Program address & baud rate |
| If both data status LEDs (TX and RX) are off when trying to communicate | Remove all unnecessary cables and instruments from the bus. Try getting the system to work with only one device (to ease troubleshooting) and then expand the system one device at a time. |
| Communications slow | Increase the baud rate |
| Random communication errors | 1.   Increase the TX delay time<br>2.   Decrease the baud rate |
| Other symptoms not described above | Call Technical Support for assistance |

**Note:** Certain sequences of events can cause unexpected results. To solve these issues, it is best to start fresh from factory defaults and use the manual as a step by step programming guide, rather than a random approach to programming. To reset the meter to factory defaults, see *Reset Meter to Factory Defaults* on page *53*. In addition, for best results, we recommend using the free MeterView Pro software for all programming needs.
